HOT CHEMISTRY AND PHYSICS IN THE PLANET-FORMING ZONES OF DISKS

PROEFSCHRIFT

ter verkrijging van de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus prof.mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 10 januari 2013
klokke 15.00 uur door

Jeanette Bast

geboren te Stockholm, Zweden in 1979

Promotiecommissie

Promotores: Prof. dr. E. F. van Dishoeck
Prof. dr. A. G. G. M. Tielens

Overige Leden: Prof. dr. K. Kuijken
Prof. dr. C. W. M. Fridlund
Prof. dr. G. A. Blake California Institute of Technology
Dr. M. R. Hogerheijde
Dr. A. M. Mandell NASA Goddard Space Flight Center

To my parents,
for teaching me to stand up, learn and move on,
whenever failure comes into your life.

Contents

1	Introduction	1
1.1	The formation of planetary systems	2
1.2	A chemical and physical inventory of planet-forming zones	5
1.2.1	Probing planet-forming regions with infrared observations	7
1.3	This thesis	11
1.4	Main conclusions	14
1.5	Future prospects and outlook	15
2	Single peaked CO emission line profiles from the inner regions of protoplanetary disks	17
2.1	Introduction	19
2.2	Observations and sample	22
2.2.1	Data reduction	23
2.3	Line profiles	25
2.3.1	^{12}CO line profiles	25
2.3.2	Keplerian disk model	27
2.3.3	Line profile parameter	32
2.3.4	Model line profile parameters	34
2.3.5	P_{10} -value versus the line-to-continuum ratio and source selection	35
2.4	Characteristics for the sources with broad single peaked lines	37
2.4.1	Line profiles of CO isotopologues and the $v = 2 - 1$ CO lines	37
2.4.2	Excitation temperatures	42
2.4.3	Lack of extended emission	46
2.5	Discussion	48
2.5.1	Rotating disk	49
2.5.2	Disk wind	50
2.5.3	Funnel flow	51
2.6	Conclusions	52

Contents

3	First detection of near-infrared line emission from organics in young circumstellar disks	55
3.1	Introduction	57
3.2	Observations and data reduction	58
3.3	Line identification and LTE slab modeling	61
3.4	Disk radiative transfer modeling	73
3.4.1	Disk modeling results	75
3.5	Comparison with chemical models	78
3.6	Conclusions	81
4	Investigation of HCN excitation in protoplanetary disks	83
4.1	Introduction	84
4.2	HCN emission at 3 and 14 μm	86
4.3	Observations	86
4.4	Radiative transfer models and their results	87
4.4.1	A standard disk model using LTE	87
4.4.2	Non-LTE excitation of HCN using a slab model	92
4.4.3	Non-LTE slab model including radiative pumping	93
4.4.4	Results introducing non-LTE and radiative pumping of HCN	95
4.5	Summary and conclusions	98
5	Exploring organic chemistry in planet-forming zones	101
5.1	Introduction	103
5.2	Observations	106
5.2.1	IRS 46 and GV Tau	106
5.2.2	Data reduction	107
5.3	Results	108
5.3.1	Spectra	108
5.3.2	C ₂ H ₂ , HCN and CO ₂	108
5.3.3	Other molecules	113
5.3.4	High resolution spectra	115
5.4	Discussion	125
5.4.1	Warm chemistry	125
5.4.2	Surface chemistry	129
5.4.3	Comparison of models with observations	129
5.4.4	Comparison with protostars, other disks and comets	130
5.5	Conclusions	131
	Appendices	133
	Bibliography	143
	Nederlandse samenvatting	153
	English summary	161
