Title: Towards a system-based pharmacology approach to predict developmental changes in renal drug clearance in children

Issue Date: 2014-05-06

Towards a System-Based Pharmacology
Approach to
Predict Developmental Changes in
Renal Drug Clearance in Children

Roosmarijn F. W. De Cock

The research described in this thesis was performed within the framework of project number D2-I04 of the Dutch Top Institute Pharma and performed at the Division of Pharmacology of the Leiden Academic Center for Drug Research, Leiden University, Leiden, The Netherlands

The printing of this thesis was financially supported by:
Leiden Academic Center for Drug Research
University Hospitals Leuven, Department of Neonatology
Bayer Healthcare, Belgium

Printed by: Off Page, Amsterdam, The Netherlands

Cover and Lay-out design: Paula Berkemeyer (PBVerbeelding)

ISBN: 978-94-6182-430-1

Towards a System-Based Pharmacology Approach to Predict Developmental Changes in Renal Drug Clearance in Children

Proefschrift

ter verkrijging van

de graad van Doctor aan de Universiteit Leiden,

op gezag van Rector Magnificus Prof. Mr. C.J.J.M. Stolker,

volgens besluit van het College voor Promoties

te verdedigen op 6 mei 2014

klokke 16.15 uur

door

Roosmarijn De Cock

Geboren te Dendermonde, België

in 1985

Promotoren:

Prof. dr. C.A.J. Knibbe

Prof. dr. M. Danhof

Prof. dr. K. Allegaert (University Hospitals, Leuven, Belgium)

Promotiecommissie:

Prof. dr. J.N. van den Anker (Children's National Medical Center, Washington D.C., United States and Sophia's Children Hospital & Erasmus Medical Center, Rotterdam, The Netherlands)

Prof. dr. A.F. Cohen

Prof. dr. P.H. van der Graaf

Prof. dr. A.P. Ijzerman

Prof. dr. B. van de Water

Contents

Section I Background and Introduction	9
<i>Chapter 1</i> Scope and outline	11
<i>Chapter 2</i> The role of population PK-PD modeling in pediatric clinical research	23
Section II Developmental changes in glomerular filtration in preterm and term neonates by describing the pharmacokinetics of renally excreted antibiotics	49
<i>Chapter 3</i> Maturation of glomerular filtration rate in neonates as reflected by amikacin clearance	51
<i>Chapter 4</i> Prospective validation of a model-based dosing regimen for amikacin in preterm and term neonates	75
<i>Chapter 5</i> A neonatal amikacin covariate model can be used to predict ontogeny of other drugs eliminated through glomerular filtration in neonates	99
Section III Developmental changes in renal function (GFR and tubular processes) in preterm and term neonates by describing the pharmacokinetics of cefazolin	127
<i>Chapter 6</i> Population pharmacokinetic modeling of total and unbound cefazolin plasma concentrations as a guide for dosing in preterm and term neonates	129
Section IV Renal and hepatic elimination of propylene glycol in preterm and term neonates	155
<i>Chapter 7</i> Developmental pharmacokinetics of propylene glycol in preterm and term neonates	157
<i>Chapter 8</i> Low but inducible contribution of renal elimination to clearance of propylene glycol in preterm and term neonates	177

Section V	<i>Developmental changes in glomerular filtration rate from neonates until adults</i>	201
Chapter 9	Simultaneous pharmacokinetic modeling of gentamicin, tobramycin and vancomycin clearance from neonates to adults: towards a semi-physiological function for maturation in glomerular filtration	203
Section VI	<i>Summary, conclusions and perspectives</i>	227
Chapter 10	Conclusions and perspectives	229
Chapter 11	Nederlandse samenvatting	249
Appendix		263
	Nawoord	265
	Curriculum Vitae	269
	List of Publications	270
