The research described in this was financially supported by the Dutch Organisation for Scientific Research (NWO-TOP Grant #40-00812-98-07-045) and was performed at the Eindhoven Laboratory for Experimental Vascular Medicine, Department of Thrombosis and Hemostasis of the Leiden University Medical Center in Leiden, the Netherlands.

Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged.

Additional support was kindly provided by Life Technologies.

Cover illustration: cross section (hematoxyline/eosin staining) of a mouse liver depleted with protein C and antithrombin.

## Table of contents

Chapter 1	General introduction	9
Chapter 2	The role of hepatocyte nuclear factor 4 $\alpha$ in regulating mouse hepatic anticoagulation and fibrinolysis gene transcript levels	39
Chapter 3	Modulation of mouse coagulation gene transcription following acute <i>in vivo</i> delivery of synthetic small interfering RNAs targeting HNF4 $\alpha$ and C/EBP $\alpha$	47
Chapter 4	The Role of FOXA1 in mouse hepatic estrogen receptor $\alpha$ signaling	75
Chapter 5	Acute and severe coagulopathy in adult mice following silencing of hepatic antithrombin and protein C production	101
Chapter 6	Regulation of the <i>F11</i> , <i>Klkb1</i> , <i>Cyp4v3</i> gene cluster in livers of metabolically challenged mice	113
Chapter 7	General discussion	139
Chapter 8	Summary	163
	Summary in Dutch (Samenvatting)	
Acknowledgements		175
Curriculum Vitae		181
