The study described in this thesis was supported by a grant of the Netherlands Heart Foundation (NHS-98.113)

Diagnosis of venous thrombosis
and
the post-thrombotic syndrome

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 24 september 2008
klokke 15.00 uur

door
Lidwine Winnifred Tick
geboren te Gouda
in 1972

Promotiecommissie

Promotores: Prof. dr F.R. Rosendaal
Prof. dr M.H.H. Kramer, Vrije Universiteit, Amsterdam

Co-promotores: Dr C.J.M. Doggen
Dr M.V. Huisman

Referent: Prof. dr M.M. Levi, Universiteit van Amsterdam, Amsterdam

Lid: Prof. dr W.R. Faber, Universiteit van Amsterdam, Amsterdam

Contents

	Page
Chapter 1 Introduction	9
Part I – Diagnosis of venous thrombosis	
Chapter 2 Practical diagnostic management of patients with clinically suspected deep vein thrombosis by clinical probability test, compression ultrasonography, and D-dimer test.	19
Chapter 3 Effectiveness of managing suspected pulmonary embolism using an algorithm combining clinical probability, D-dimer testing, and computed tomography.	33
Chapter 4 Excluding pulmonary embolism without imaging tests; can our diagnostic algorithm be optimized?	51
Chapter 5 High D-dimer levels increase the likelihood of pulmonary embolism.	65
Part II – The post-thrombotic syndrome	
Chapter 6 Risk factors for the post-thrombotic syndrome in patients with a first deep venous thrombosis.	79
Chapter 7 Predictors of the post-thrombotic syndrome with non-invasive venous examinations in patients six weeks after a first episode of deep venous thrombosis.	97
