The Evolution of Ageing: Concepts, Causation and Calculus

Proefschrift

ter verkrijging van

de graad van Doctor aan de Universiteit Leiden,

op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,

volgens besluit van het College voor Promoties

te verdedigen op dinsdag 27 januari 2015

klokke 13:45

door

Maarten Jan Wensink

geboren te Amstelveen

in 1984

Promotiecommissie**Promotores:**

Prof. dr. R.G.J. Westendorp

Prof. dr. A. Baudisch (Max Planck Institute for Demographic Research, University of Southern Denmark)

Overige leden:

Prof. dr. H. Caswell (Universiteit van Amsterdam, Woods Hole Oceanographic Institution)

Prof. dr. C.J. ten Cate

Prof. dr. P.E. Slagboom

Contents

Part I: Introduction	1
1. Preamble: Why and What	3
Part II: Conceptual Papers	11
2. The causal pie model: an epidemiological method applied to evolutionary biology and ecology	13
3. Age-specificity and the evolution of senescence: a discussion	27
4. The maintenance gap: a new theoretical perspective on the evolution of aging	39
Part III: Mathematical Papers	47
5. No senescence despite declining selection pressure: Hamilton's result in broader perspective	49
6. 'Extrinsic mortality' does not drive the evolution of senescence	63
7. Interaction mortality: senescence may have evolved because it increases lifespan	79
Part IV: Data Paper	93
8. Intrinsic and extrinsic mortality reunited	95
Part V: Discussion	105
9. Limitations	107
10. Future directions	111

Part VI: Appendices	119
A. Glossary of terminology	121
B. Survival analysis and Darwinian fitness	123
C. Nederlandse samenvatting / Summary in Dutch	127
D. List of publications	139
E. Curriculum vitae	141
F. Acknowledgements	143
