Title: The IL-12 family and dendritic cells : key regulators of immunity and immunological tolerance

Issue Date: 2014-08-28

The IL-12 family and Dendritic cells

Key regulators of immunity and immunological tolerance

Karen Dixon

The IL-12 family and Dendritic cells
Key regulators of immunity and immunological tolerance.

The research presented in this thesis was performed at the Department of Nephrology, Leiden University Medical Center, The Netherlands.

The research described in this thesis was supported by a Marie Curie TranSVIR fellowship (TranSVIR FP7-PEOPLE-ITN-2008 No.238756) funded by the European commission under the 7th framework programme.

Financial support by the Dutch Kidney Foundation, Astellas Pharma B.V, Hycult Biotech and Miltenyi Biotech for the publication of this thesis is gratefully acknowledged.

The IL-12 family and Dendritic cells

Key regulators of immunity and immunological tolerance

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus Prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op 28th August 2014
klokke 16.15 uur

door

Karen Dixon
(Karen Nic Riocáird)
Born in Dublin, Republic of Ireland,
June 1986.

Promotiecommissie

Promotor: Prof. Dr. C van Kooten

Overige leden: Prof. Dr. Andrew Rees
Medical University of Vienna

Prof. Dr. Bart Roep
Leiden University Medical Centre

Prof. Dr. Marieke van Ham
University of Amsterdam

Dr. Andrea Woltman
Erasmus Medical Center, Rotterdam

“Education is an admirable thing, but it is well to remember from time to time, that nothing that is worth knowing can be taught.”
— Oscar Wilde

Table of Contents

Chapter 1	General introduction	9
Chapter 2	Human tolerogenic dendritic cells produce IL-35 in the absence of other IL-12 family members. <i>Under revision.</i>	33
Chapter 3	Phagocytosis of apoptotic or necrotic cells differentially regulates the transcriptional expression of IL-12 family members in dendritic cells. <i>J Leukoc Biol, 2014 (In Press).</i>	53
Chapter 4	Properdin and factor H production by human dendritic cells is differentially regulated by IFN γ and has a functional role in the T cell stimulatory capacity of dendritic cells. <i>Under revision.</i>	73
Chapter 5	Non-haematopoietic derived Epstein Barr Virus induced gene 3 expression in normal human kidney.	93
Chapter 6	Human renal fibroblasts, through the secretion of IL-6, generate dendritic cells with a unique regulatory profile. <i>Immunol Cell Biol, 2014 (In Press).</i>	111
Chapter 7	General discussion	131
Chapter 8	English, Irish & Dutch Summaries List of abbreviations Acknowledgements Curriculum vitae Bibliography	149
