Potential role of pharmacogenetics for optimization of drug therapy in rheumatoid arthritis

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 9 december 2009
klokke 11.15 uur
door

Wouter Michiel Kooloos

geboren te Leiderdorp
op 14 december 1982

Promotores

Contents

Chapter 1:	General Introduction and Outline	7
<i>Part I: Methotrexate</i>		
Chapter 2:	Pharmacogenetics of methotrexate in rheumatoid arthritis	19
Chapter 3:	Relationship between genetic variants in the adenosine pathway and outcome of methotrexate treatment in patients with recent-onset rheumatoid arthritis.	31
Chapter 4	Functional polymorphisms and methotrexate treatment outcome in recent-onset rheumatoid arthritis	49
Chapter 5	Cross-validation of a clinical pharmacogenetic model to predict the efficacy of MTX monotherapy in established RA	67
Chapter 6	Validation of the clinical pharmacogenetic model by predicting MTX monotherapy efficacy in a Swedish Cohort of patients with recent-onset rheumatoid arthritis	81
Chapter 7	The influence of the number of haplotypes of MTHFR 1298A-677C alleles on the predicted probability to respond to methotrexate in early RA patients	93
<i>part II: Adalimumab</i>		
Chapter 8	Pharmacogenetics of TNF inhibitors in rheumatoid arthritis	105
Chapter 9	Criteria for the selection of single nucleotide polymorphisms in pathway pharmacogenetics: TNF inhibitors as a case-study	119
Chapter 10	Pharmacogenetics of adalimumab in RA: genetic variants related to mechanism of action of TNF inhibitors	135
Chapter 11	Summary	149
Chapter 12	General discussion and future perspectives	153
