Table of Contents

Chapter 1	9
General Introduction	
Chapter 2	51
The newborn rat's stress system readily habituates to repeated and prolonged maternal separation, while continuing to respond to stressors in context dependent fashion.	
Chapter 3	75
Beyond maternal absence: evidence for the role of peers and non-shared stressful experience in mediating the development of a fearful phenotype	
Chapter 4	99
Testing the three-hit hypothesis of schizophrenia: ACTH hyper-reactivity and schizophrenia-like endophenotypes co-precipitate in genetically-susceptible rats following early-life adversity and post-weaning social isolation experiences	
Chapter 5	141
Testing the cumulative stress and mismatch hypotheses of psychopathology in a rat model of early-life adversity	
Chapter 6	165
General Discussion	
Addendum	185
Environmental and tactile stimulation modulates the neonatal handling effect on adult rat spatial memory.
