First of all, I would like to thank all the people of the Garu-Tempane district in Ghana who voluntarily participated in the research described in this thesis. Most of them will never see this thesis nor benefit directly from its results, but this research would not have been possible without them. The hospitality of the region has been heartwarming and the experience of living here has changed my life perspective in various ways.

The work described in this thesis is the combined effort and dedication of many people. First, I would like to thank all the co-workers in Ghana that have contributed to the studies described in this thesis: Awel, the project driver, who drove us safely around Ghana many years; Lizzy who cooked delicious Ghanaian and European dishes; Paschalina, who was a great help in the office; Daniel, who introduced me to all aspects of Ghanaian life; Moses, the honourable assembly men who introduced me to the local chiefs and elderly; Justice, who was a great help in the office and wherever needed; John Kombat and Simon for their great devotion from the start of the project onwards, and John Abugri, Alex, Thomas, Solomon, Judas, Hawa and Dent for their perseverance during all the long fieldwork days in the hot African savanna.

Thanks to all other people in Ghana and Burkina Faso for their support of our expeditions: Father Vincent, Father Gabriel, Father Damian, Father Desmond, Manolo Bonet, Dr. Peter and Lieve. Thanks to Jan van der Horst for his kind hospitality anytime we were in Ouagadougou. I will never forget the experience of flying with your small plane over the African savanna.

Many thanks also to all the Dutch co-workers who participated in the research; First of all to Rudi Westendorp for his guidance and inspiration, to Hans Meij, who introduced me to Africa and made this entire experience possible; to Linda May, for being a great colleague and teaching me how to get organised both in Africa and in the Netherlands; to Maarten Rozing for being a great roommate during the fieldwork; to Ulrika Eriksson for coming all the way from Sweden to join the Ghana project and to all students that joined our expeditions: Marleen, Femke, Diana, Tom, Vanessa, Karin, Arianne, Bart, Tirsia and Toke.

Acknowledgements

I would also like to thank all the colleagues from the Department of Gerontology & Geriatrics of the Leiden University Medical Centre, especially Ton de Craen, who was a great help whenever things got complicated. Thanks also to Maris Kuningas and Peter van Vliet for all discussions; scientific and beyond.

Thanks to everybody from the Leyden Academy on Vitality and Ageing, working here is a joy everyday. A special thanks to Jolanda Lindenberg, for all the work she did at the Leyden Academy so that I could finish this thesis and to Yvonne Koemans for the careful editing of the manuscript. Thanks to all the students from the Young Excellence Class of the Leyden Academy; the discussions with you inspired me at more than one point in this thesis.

Also, I would like to thank people from other departments. Thanks to the department of Parasitology, especially Ton Polderman and Juventus Ziem who started the research project in Garu and set up the database. Thanks to department of Biology, especially Bas Zwaan for all discussions on evolutionary biology. Thanks to the department of Molecular epidemiology of Eline Slagboom and to all people here who were involved in all the laboratory work, especially Eka Suchiman for her help with the mouthswabs. Thanks to the department of Human Genetics, especially Peter de Knijff, Jeroen Pijpe en Eric Sanchez. Thanks also to Ralf Kaptijn and Fleur Thomése from the department of sociology of the VU University of Amsterdam.

This is also a good place to thank all the financial contributors, without whom this research would also not have been possible. This research was supported by the Netherlands Foundation for the advancements of Tropical Research (grant number WOTRO 93-467), the Netherlands Organization for Scientific Research (NWO 051-14-050), the EU funded Network of Excellence LifeSpan (FP6 036894), an unrestricted grant of the Board of the Leiden University Medical Center and Stichting Dioraphte.

Many people assisted to this thesis in a more indirect manner. Thanks to all family and friends, my parents Bert en Marjan, my brother Ruben, who was always there to play a game of squash and set the mind to other things. Thanks to Michaël whose persisting interrogations improved this thesis a lot. Thanks to Arnoud, Marijn and Joris from the Institute for Arctic Psychology. It was their methodology

that proved equally applicable to the African savanna. Thanks to Franca, whose encouragement inspired me to write, which I now enjoy so much. Thanks to all other friends. Lastly, I would like to thank Emmeline, my wife and muse, who gives meaning to everything I do.

Curriculum vitae

Curriculum vitae

David van Bodegom was born on the 30th of January 1978 in Zuidhorn, the Netherlands. From 1990 to 1996 he attended the Rotterdam Montessori Lyceum and completed his VWO studies. At age eighteen, he moved to Leiden, where he studied Ancient history and in 2000 graduated (cum laude) on a study on Greek sacrifices. After this, he started his medical training, which resulted in his master degree in 2004 (cum laude) and his medical degree in 2007. From 2004 onwards he became involved in the Ghana research project of the department of Gerontology & Geriatrics of the Leiden University Medical Centre. First as a student and later as a Phd student, he travelled extensively between the Netherlands and the research area in Ghana. Since 2009, he is a member of the scientific staff of the Leyden Academy on Vitality and Ageing, which aims to improve the quality of life of older people. Here, his main responsibilities include the research programme of the academy and the international post-graduate master Vitality and Ageing, which trains medical doctors to become pioneers in the field of ageing. Since 2010, he is appointed assistant professor of medicine at the Leiden University Medical Centre.

Since 2007 David volunteers as a medical doctor at the *Kruispost* in Amsterdam, a health clinic where he provides basic medical care to people who can not find help elsewhere. In his spare time he enjoys writing columns and fiction.
