ACKNOWLEDGEMENT

I am grateful to my colleagues in the anaesthetic department, the paediatric intensive care unit and the paediatric cardiac surgery department for their cooperation. Without their help this thesis would never had come to fruition. A special thanks to the nursing staff in the paediatric intensive care unit and the anaesthetic assistants in the cardiac theatres, their cooperation and enthusiasm were essential.

CURRICULUM VITAE

Ignacio Malagon was born in Madrid, Spain on 3 December 1962. He attended medical school at the Universidad Complutense Madrid and graduated in 1986. In 1988 he obtained a Master in Philosophy on biochemistry at the same university. His anaesthetic training started in 1990 in Great Britain, and included a senior house officer rotation at Leicester Royal Infirmary and registrar positions in Birmingham and St Bartholomew's Hospital in London. In December 1994 he successfully completed the final exam for the fellowship at the Royal College of Anaesthetists of United Kingdom (FRCA). The subsequent training included a post as fellow in adult intensive care at St George's Hospital in London and a senior registrar rotation at Guy's and St. Thomas' Hospital in London. To round up his training he completed a year paediatric intensive care fellowship program at the Vancouver Children's Hospital in British Columbia, Canada.

In 1999 he was appointed consultant cardiac anaesthetist with a special interest in paediatric cardiac surgery at the Leiden University Medical Centre, where he has been working ever since.
