The studies described in this thesis were funded by the Netherlands Institute for Health Research and Development (ZonMw, Grant Number 157004010).

The studies were submitted for evaluation to the Medical Ethical Committee in The Hague, the Netherlands (number 11-040 and 11-148), who decided that their approval was not required.

Financial support for the publication of this thesis was kindly provided by the Board of Directors of Medical Centre Haaglanden and Bronovo-Nebo.

CONTENTS

1. General introduction and outline of the thesis	7
2. A new protocol for screening adults presenting with their own medical problems at the Emergency Department to identify children at high risk for maltreatment	21
3. Facilitators and barriers to the successful implementation of a protocol to detect child abuse based on parental characteristics	45
4. Missed cases in the detection of child abuse based on parental characteristics in the Emergency Department (the Hague protocol)	71
5. What parental characteristics can predict child maltreatment at the Emergency Department? Considering expansion of the Hague protocol.	81
6. Support and monitoring of families after child abuse detection based on parental characteristics at the Emergency Department	91
7. Detecting child abuse based on parental characteristics: does the Hague protocol cause parents to avoid the Emergency Department?	109
8. General discussion	123
