Soils in transition: dynamics and functioning of fungi

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 24 oktober 2007
klokke 16.15 uur

door

Annemieke van der Wal

geboren te Heemskerk
in 1979

Promotiecommissie

Promotor	Prof. dr. J.A. van Veen Leiden University
Co-promotor	Dr. W. de Boer Netherlands Institute of Ecology, Heteren
Referent	Prof. dr. R.D. Bardgett Lancaster University
Overige leden	Dr. M.P. Berg VU University Amsterdam Prof. dr. P.J.J. Hooykaas Leiden University Prof. dr. E.M. van der Meijden Leiden University Prof. dr. G.R. de Snoo Leiden University

Contents

Chapter 1	General introduction	7
Chapter 2	Fungal biomass development in a chronosequence of land abandonment <i>Soil Biology & Biochemistry 38 (2006) 51-60</i>	17
Chapter 3	Concentration and vertical distribution of total soil phosphorus in relation to time of abandonment of arable fields <i>Nutrient Cycling in Agroecosystems 79 (2007) 73-79</i>	35
Chapter 4	Constraints on development of fungal biomass and decomposition processes during restoration of arable sandy soils <i>Soil Biology & Biochemistry 38 (2006) 2890-2902</i>	45
Chapter 5	Initial decay of woody fragments in soil is influenced by size, vertical position, nitrogen availability and soil type <i>Submitted</i>	69
Chapter 6	Possible mechanism for spontaneous establishment of <i>Calluna vulgaris</i> in a recently abandoned agricultural field <i>Accepted in Restoration Ecology</i>	89
Chapter 7	General discussion	99
