ARCHAEOLOGICAL STUDIES LEIDEN UNIVERSITY

Archaeological Studies Leiden University

Archaeology and the application of Artificial Intelligence

Case-studies on use-wear analysis
of prehistoric flint tools

Proefschrift
ter verkrijging van de graad van Doctor
aan de Rijksuniversiteit te Leiden,
op gezag van de Rector Magnificus Dr. W.A. Wagenaar,
hoogleraar in de Faculteit der Sociale Wetenschappen,
volgens besluit van het College van Dekanen
te verdedigen op 21 januari 1998
te klokke 15.15 uur

door

Monique Henriëtte VAN DEN DRIES

geboren te Zierikzee in 1965

Faculty of Archaeology University of Leiden 1998

Promotiecommissie

promotor: Prof.dr. L.P. Louwe Kooijmans

co-promotores: Dr. A.L. van Gijn
Dr. H. Kamermans

referent: Prof.dr. J.E. Doran (University of Essex, Colchester)

overige leden: Prof.dr. J.N. Kok

contents

1	Introduction	9
2	The application of artificial intelligence in archaeology	11
2.1	Introduction	11
2.2	Historical and contextual background	11
2.2.1	The emergence of quantitative methods	11
2.2.2	A new approach: artificial intelligence	12
2.3	Review of knowledge-based applications in archaeology	13
2.4	Attitudes towards the application of knowledge-based methods	15
2.4.1	From high expectations to cautiousness	15
2.4.2	Lessons	15
2.4.3	Discussion	16
3	Expert system fundamentals	19
3.1	Introduction	19
3.2	Architecture	19
3.3	Knowledge representation and reasoning methods	21
3.3.1	Introduction	21
3.3.2	Predicate logic	21
3.3.3	Production rules	23
3.3.4	Semantic nets	24
3.3.5	Frames	25
3.3.6	Hybrid representation	26
3.4	Expert-system development process	26
3.4.1	Introduction	26
3.4.2	Orientation	26
3.4.3	Knowledge acquisition	27
3.4.4	Design, implementation and evaluation	28
3.5	Implementation tools	28
3.5.1	Introduction	28
3.5.2	Programming languages versus shells	29
4	The application domain: use-wear analysis of prehistoric flint tools	31
4.1	Introduction	31
4.2	The emergence and development of use-wear analysis	31
4.3	Methodical aspects	33
4.3.1	Combination of information sources	33
4.3.2	Use-wear phenomena	33
4.3.3	Microscopy	35
4.4	Difficulties encountered	36
4.5	From a qualitative to a quantitative method?	37
4.5.1	Introduction	37

4.5.2	Automation of the observation process	38
4.5.3	Quantification of recordings	40
4.5.4	Automation of the inferencing process	40
4.6	Discussion	41
5	An expert system application for use-wear analysis: WAVES	43
5.1	Introduction	43
	part one: WAVES under construction	44
5.2	The knowledge acquisition	44
5.2.1	Introduction	44
5.2.2	The elicitation of the expert knowledge	44
5.2.3	The data analyzed	46
5.2.4	Knowledge modelling and uncertainty handling	49
5.3	Design and implementation	51
5.3.1	Introduction	51
5.3.2	Knowledge handling	51
5.3.2.1	Requirements	51
5.3.2.2	Decisions	52
5.3.3	User interface	53
5.3.3.1	Requirements	53
5.3.3.2	Decisions	53
5.3.4	Hardware and software	54
5.3.4.1	Requirements	54
5.3.4.2	Decisions	54
5.4	Discussion	55
5.4.1	Introduction	55
5.4.2	On using knowledge derived from experiments	56
5.4.3	On managing uncertainty	56
	part two: WAVES in action	57
5.5	The composition of the analysis procedure	57
5.6	The composition of the hypothesis validation procedure	60
5.7	A session	61
5.7.1	Getting started	61
5.7.2	Running the analysis procedure	63
5.7.3	Interpreting the interpretation	66
5.7.4	Running the hypothesis validation procedure	69
5.8	An assessment of the composition of the application	72
5.8.1	Introduction	72
5.8.2	Answers to expectations of <i>computer archaeologists</i>	72
5.8.3	Answers to expectations of use-wear analysts	74
5.8.4	Unanswered questions and suggestions for additions	76
5.9	Comparison with FAST	77
6	A neural network prototype for use-wear analysis: WARP	79
6.1	Introduction	79
6.2	Neural network fundamentals	80
6.2.1	Historical backgrounds	80
6.2.2	Architecture	81
6.3	Development process	83
6.3.1	Introduction	83
6.3.2	Knowledge representation	83
6.3.3	A matter of training and experimentation	84

6.3.4	A session	85
6.4	The prototype	86
6.4.1	Introduction	86
6.4.2	The knowledge represented	86
6.4.3	The training process	88
6.5	An assessment of the prototype	89
6.5.1	Introduction	89
6.5.2	Answers to expectations of <i>computer archaeologists</i>	89
6.5.3	Answers to expectations of use-wear analysts	90
6.5.4	Suggestions for additions	91
7	Test results	93
7.1	Introduction	93
7.2	Blind tests in use-wear analysis	94
7.3	The first test	95
7.3.1	Test-set composition	95
7.3.2	The expert system's achievements	96
7.3.3	The neural network's achievements	97
7.3.4	Conclusion	98
7.4	The second test	99
7.4.1	Introduction	99
7.4.2	Test-set composition	99
7.4.3	Achievements	105
7.4.4	Conclusion	113
7.4.5	Comparison with other blind tests	117
7.5	Discussion	120
8	Synthesis	123
8.1	Introduction	123
8.2	The added value of expert systems and neural networks	123
8.2.1	Expert systems	123
8.2.2	Neural networks	124
8.2.3	Expert systems versus neural networks?	125
8.3	Added value of knowledge-based systems for archaeology	125
8.4	Recommendations	126
8.4.1	A different approach of functionality	126
8.4.2	Care for social acceptability	127
8.4.3	Change of attitude	128
8.5	Concluding remarks	129
Appendix I: The conceptual knowledge of the analysis procedure		131
Appendix II: The conceptual knowledge of the hypothesis validation procedure of WAVES		147
Appendix III: The input and output variables of WARP		153
Appendix IV: Descriptions of the blind test		155
Appendix V: Interpretations of the blind test		171
