B Paradigms

B.1 Intransitive agreement

The agreement tables listed below are based on data that are recorded in Sindrāñ in Bhojpur district and further elicited from speakers of that area. This explains both why the data are very similar to the data of Rai (1985) and why there are some systematic differences.⁶

simple forms

⁶The description of Bantawa as found in Rai (1985) differs slightly from the data presented here. The morpheme <ni-> (3A) roughly corresponds to <im> in Rai (1985). The ordering of prefixes is different in Rai (1985). The 1 → 2 and 2 → 1 non-singular forms are reduced in the dialect treated here, but more extensively marked in the presentation of Rai's tables as found in Ebert (1994). For many forms, the comparison cannot be made because Rai (1985) does not give full paradigms.

B.2 ‘To walk’

Below the affirmative and negative paradigms are given of the non-past tense, past tense and imperative mood of the verb *konma* ‘to walk’.

3s	ta	itanin	ta	manta		
3d	taci	itacin	taci	mantaci		
3p	mita	nitandin	mita	mantamida		

B.5 ‘To need’

Below, the affirmative and negative conjugation paradigms are given of the non-past and past tenses in both the simple, perfective and progressive aspect of the part of the verb *caha metma* ‘to need’. The concept ‘to need’ is expressed by an intransitive conjugation of the verb *caha metma* ‘to need’.

- (141) *in*ka *ch*apdani *caha met-ŋa-Ø-ŋa*
 I pen need apply-1s-PROG-1s
 ‘I need a pen’

The verb stem *metma* ‘apply’ is used in different grammatical roles in Bantawa, such as an analytical causativiser. *Metma* also serves as a host of flection for a collection of bimorphemic verb roots. Those bimorphemic verb roots have the characteristic that the left morpheme serves to convey the main semantic content, whereas the right hand member *metma* indicates to whom this situation or feeling applies. The verb *metma* may then be glossed ‘apply’.

Interestingly, in the complex verb *caha metma* the verb agrees with the needer and conjugates intransitively. By contrast, verbs such as *k^halampa metma* ‘to have a cold’ agree transitively with a cold as a third person agent and with the undergoer. In the case of *caha metma*, all noun phrases in the clause are in the absolutive case.

B.8 The verb ‘to kill oneself by hanging’

Below one finds a sample paradigm of ‘to kill oneself by hanging’ in simple aspect only. This is a paradigm of a reflexive compound verb. Here only the left member carries prefixes, but its suffix string is truncated to a single syllable.

The verbs ‘to hang’ (*ciŋma*, root <*ciŋ* ~ *ciŋs*>) and ‘to kill’ (*setma*, root <*set* ~ *ser*>) are the root for these reflexive forms.
