The Generation R Study is conducted by the Erasmus Medical Center in close collaboration with the School of Law and Faculty of Social Sciences of the Erasmus University Rotterdam, the Municipal Health Service Rotterdam area, Rotterdam, the Rotterdam Homecare Foundation, Rotterdam and the Stichting Trombosedienst & Artsenlaboratorium Rijnmond (STAR), Rotterdam. We gratefully acknowledge the contribution of general practitioners, hospitals, midwives and pharmacies in Rotterdam. The first phase of the Generation R Study is made possible by financial support from the Erasmus Medical Center, Rotterdam, the Erasmus University Rotterdam and the Netherlands Organization for Health Research and Development (ZonMw). The present study was supported by additional grants from the Netherlands Organization for Scientific Research (grant no. 400-04-182, grant no. 452-04-306 (VIDI), and NWO SPINOZA prize).

Contents

1. Introduction	7
2. Attachment, depression, and cortisol: Deviant patterns in insecure-resistant and disorganized infants	13
3. FKBP5 and resistant attachment predict cortisol reactivity in infants: Gene-environment interaction	29
4. The association between parenting and attachment is moderated by a polymorphism in the mineralocorticoid receptor gene: Evidence for differential susceptibility	41
5. Attachment genes? Associations of dopaminergic, serotonergic, oxytonergic and neuroplasticity candidate genes with attachment security and disorganization	49
6. Discussion: Vulnerability and plasticity	63
