The research presented in this thesis was supported by the Leiden Institute for Brain and Cognition, the Gratama stichting and Leids Universiteits Fonds (granted to Eveline Crone), and VIDI grants from the Netherlands Organization for Scientific Research (NWO; to Serge Rombouts and Eveline Crone).

Financial support for the publication of this thesis was kindly provided by *Foundation Imago*, Oegstgeest, The Netherlands.

the changing brain

Neurocognitive Development & Training of Working Memory

Proefschrift

ter verkrijging van

de graad van Doctor aan de Universiteit Leiden,

op gezag van de Rector Magnificus prof. mr. P. F. van der Heijden,

volgens besluit van het College voor Promoties

te verdedigen op dinsdag 27 september 2011

klokke 13.45 uur

door

Dietsje Diaan Jolles

Geboren te Utrecht

Contents

1. Introduction	7
-----------------	---

Part I: Brain activation and functional connectivity differences between children and young adults

2. Developmental differences in working memory-related brain activation: a test for specificity	17
3. Functional connectivity of spontaneous brain activation in children and young adults	37

Part II: Working memory training effects in children and young adults

4. Training effects in the adult brain: neural activation changes depend on working memory demands	53
5. Training effects in the developing brain: children show more adult-like activation after working memory training	83
6. The effects of working memory training on resting-state functional connectivity in adults and children	111

Part III: Discussion

7. Training the developing brain: a critical evaluation	133
8. Summary and concluding remarks	155
