## Acknowledgements

Over the years many people have helped and inspired me, for which I owe them my sincere gratitude. In the first place I would very much like to thank Annelou van Gijn, for her seemingly endless trust in me, her friendship and her constant guiding in my studies, writing and travelling, since my days as a young student. I would like to thank Corinne Hofman, Menno Hoogland and André Delpuech for welcoming this research into their project and their introduction into the Caribbean. I thank Leendert Louwe Kooijmans for his interest in functional analysis, his critical thorough reading of the text and his patience in taking me to the next level. For making this project financially possible, I would like to thank the NWO-Aspasia programme, which provided the opportunity to carry out the research, and the DRAC Guadeloupe for covering the expenses of the fieldwork. The Lejre Historical Archaeological Research Centre granted Annelou van Gijn and me yearly short visits between 2000 and 2005. Marianne Rasmussen gave us a very warm welcome each year. In 2000 the Laboratory of Artefact Studies received a Van Gogh-grant which enabled me to visit the CNRS in Valbonne. I would like to thank Patty Anderson, Hugues Plisson, Sylvie Beyries, Catherine Cade and Liliane Meignen for many fruitful discussions and sharing their expertise with me during my stay. In 2004 I stayed at the Florida Museum for Natural History where I was kindly received by William Keegan, Irv Quitmeyer and Bill Marquardt. I'd like to thank them all for sharing their enthusiasm and knowledge on Caribbean shell material and for allowing me to study their reference collections.

I furthermore owe many thanks to my colleagues and friends in the field of functional analysis: Laurence Astruc, Iris Briels, Channah Nieuwenhuis and Annemieke Verbaas, and in the field of Caribbean (shell) archaeology: Aad Boomert, Alistair Bright, Tom Hamburg, Richard Jansen, Sebastiaan Knippenberg, Dennis Nieweg, Nathalie Serrand, Frank Stevens and Maaïke de Waal. For the experimental program I received a lot of help from especially Iris Briels, but also to a great extent from Mikkel Sørensen, Eric Pellisier, Anne-Lise Vredendregt, Monique Ruig, Harold Kelly, Yann Hoogland and from several students. Iris Briels also helped with chapter 3, as well as Alistair Bright. Raf Timmermans, Medy Oberendorff and Erick van Driel took care of the drawings, Jan Pauptit took photographs of all objects. Alice Samson corrected my English with patience and perseverance; Anne-Lise Vredendregt read drafts of Chapter 5 and corrected the bibliography. Tino Lammers edited many of the figures and is responsible for the lay-out. Eric Mulder was a wonderful constant factor in the Laboratory during the microscopic research and has endured my impatient comments for many years with praiseworthy tolerance. I owe you an apology! My tea-break-partners at the faculty Joanne, Medy, Eric, Eric, Noor, Tjaco and Hans distracted me with lively discussions on all aspects of life other than archaeology and held me company during the whole research time. They made sure I kept putting my struggles with the topic in perspective and saved me from burying myself under my desk.

To conclude, I would like to thank the people surrounding me; without them this thesis would not have been finished. A very warm thank-you goes out to Jeroen Flamman, Roeland Paardekooper, Judith Schuiter and Willem Baron of the Vereniging Archeologische Educatie en Experimenten for showing me, each in his own way, for more than 18 years already, how much fun experimental archaeology can be, without losing the 'scientific perspective'.

To Sonja and Rob Eijsackers I owe so much, for taking care of my children in a way that nobody could ever dream of. Thank you for relieving me of both care and concern.

My dearest friends, Meta, Godelieve and Peter, Menno and Lilian, Esther and Leon, Harm and Anita, have always trusted and encouraged me. I appreciate their interest in me and my 'project', their patience and their never faltering believe that I could finish it, more than I can tell. A special word goes out to Anne-Lise: there is no way that I can express enough gratitude to her, because the best result of this research is the friendship we found during my first steps in the Caribbean. May our bare feet carry us together to other unknown worlds many times to come.

## ACKNOWLEDGEMENTS

My parents, Ans en Piet Keijsers started it all by taking me to Lejre at a very young age and by allowing me to loose my heart there. I warmly thank them for their support, interest and patience in all the things I ever wanted to achieve, even if it meant crossing the world to unknown countries or unladylike experimentation on hardly recognizable animalparts. Thank you Edwin, for all our fierce discussions and just for being a brother to look up to; you taught me many things which are all very much appreciated.

To Tino, Thidder and Arthur I wish to express my loving gratitude for being my life and home. They show me every day that the longing to dwell in the past can be replaced by a love in the present.
