Curriculum Vitae

Anneke Wegener Sleeswijk was born in 1960 in Naarden, The Netherlands. She graduated from secondary school Sint Maartenscollege in Haren in 1979 (VWO). After her graduation, she lived in Cambridge (UK) for a short while, where she followed a course in English (Proficiency) at the Cambridge School of Languages. From 1980-1987, she studied biology at the Rijksuniversiteit Groningen. From 1983-1984, she interrupted her studies for a trip through India, where she worked as a volunteer at the Beatitudes Social Welfare Centre in Madras. She graduated from her biology study in 1987 in the fields of cell genetics and biological psychiatry, and acquired a teacher qualification as well. From 1987-1989, she worked in the Leiden University hospital AZL (now LUMC) as a nurse. From 1989-1990, she followed a post-graduate course on environmental science at P-HTS in Amsterdam. In 1991, she started to work as a volunteer at the Centre of Environmental Science (CML) of Leiden University, where she also started her work on toxicity and exposure assessment for the LCA manual and background documents of 1992, and produced the corresponding characterisation factors for the toxicity-related impact categories. From 1993-2006, she was appointed as a researcher and later as a PhD-student at CML. Apart from her thesis, she worked on several LCA studies, mainly on methodological issues. Besides spatially differentiated fate and exposure modelling, she has also specialised in the methodological complications of agricultural product assessment. In 2006, she was appointed as a researcher at the Radboud University Nijmegen, where she worked on the collection of region-specific environmental parameters for Canada and the United States, and on LCA normalisation, in collaboration with CML. By the end of 2006, Anneke started up her own business GLOBRIGHT. One of her jobs was to build an LCA web portal for RIVM, which she finished in the first half of 2007. Some smaller projects followed. From September 2009 to July 2010, Anneke was appointed at CE Delft, where she worked on the subject of chain management research. She then decided to change back to her own GLOBRIGHT business, to work as a freelancer again. In her leisure time, Anneke works on autism research. It is one of her passions to contribute to the integration of the many different disciplinary research results on this subject.
