## Development of personalized health monitoring using ultraweak photon emission based on systems medicine concepts

Proefschrift

ter verkrijging van de graad van Doctor aan de Universiteit Leiden,

op gezag van Rector Magnifcus prof.mr. C.J.J.M. Stolker,

volgens het besluit van het College voor Promoties

te verdedigen op donderdag 13 april 2017

klokke 11:15 uur

door

Maastricht University, The Netherlands

This research described in this thesis was financially supported by the Chinese Scholarship Council (CSC) with "Chinese government graduate student overseas study program" as a PhD scholarship (File no. 201208220167).

## Contents

Chapter 1: 7	
Introduction	
Chapter 2:	
A Chinese literature overview on ultra-weak photon emission as promising technology for studying system-based diagnostics	
Chapter 3: 43	
Measuring ultra-weak photon emission as a non-invasive diagnostic tool for detecting early-stage type 2 diabetes: a step toward personalized medicine	
Chapter 4: 67	
Delayed luminescence: an experimental protocol for Chinese herbal medicines	
Chapter 5: 93	
Effects of growth altitude on chemical constituents and delayed luminescence properties in medicinal rhubarb	
Chapter 6: 123	
Characterization of the therapeutic properties of Chinese herbal materials by measuring delayed luminescence and dendritic cell-based immunomodulatory response	
Chapter 7: 155	
Summary, conclusions, and perspectives	
Samenvatting 165	
Curriculum Vitae 169	
List of publications 170	
Acknowledgements
