Title: Facing society: A study of identity through head shaping practices among the indigenous peoples of the Caribbean in the ceramic age and colonial period

Issue Date: 2017-05-16

Facing Society

A study of identity through head shaping practices among the indigenous peoples of the Caribbean in the Ceramic Age and Colonial Period

Proefschrift
ter verkrijging van
de graad van Doctor aan de Universiteit Leiden
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 16 mei 2017
klokke 11.15 uur

door
Anne van Duijvenbode
geboren te Leiden
in 1987

Promotor:

Prof. dr. Corinne L. Hofman

Co-promotor:

Dr. Darlene A. Weston

Overige leden:

Prof. dr. David R. Fontijn

Prof. dr. Raymond H.A. Corbey

Prof. dr. Joanna R. Sofaer (University of Southampton)

Prof. dr. Pieter J. ter Keurs (Rijksmuseum van Oudheden)

Dr. Arie Boomert

catalogue No. 349447, Department of Anthropology, Smithsonian Institution.

This work is part of the research programme
Facing Society with project number 322-60-001,
which is (partly) financed by the Netherlands
Organisation for Scientific Research (NWO).

Netherlands Organisation
for Scientific Research

ACKNOWLEDGEMENTS

Identity and processes of identification revolve around connections between people and the same can be said for the scientific process behind this dissertation. Scientists and studies do not exist in isolation and the current project is inherently tied and indebted to numerous scholars, scientific investigations, and institutions.

First and foremost, I must mention my supervisor Corinne L. Hofman and her scientific endeavours. She has been a continued source of inspiration and has always encouraged me to look for the bigger picture. The Caribbean Research Group she created at the Faculty of Archaeology and her research projects through the years have provided the academic embedding for this project. NWO-VICI project Communicating Communities and ERC-Synergy project NEXUS1492, in particular, have been a vital source of data and ideas for this Ph.D. project. My co-supervisor Darlene Weston has provided valuable advice on both my research and my dissertation. Thank you for taking time out of your busy schedule to help me.

This research has been funded by the Facing Society grant (322-60-001) provided by the Netherlands Organisation for Scientific Research (NWO) through their PhD's in the Humanities scheme. Additional funds were provided by grants obtained from the Leiden University Fund (LUF)/ Byvanck and the Jo Kolk Studiefonds.

This project would not have been possible without access to numerous collections of Caribbean skeletal material. I would like to thank the following people and institutions for providing generous access to their collections and assisting me throughout my research: Roberto Valcárcel Rojas, Elena Guarch Rodríguez, Lourdes Pérez Iglesias, Marcos Labrada Ochoa, Ileana Rodríguez Pisonero, and Pedro Cruz Ramírez (CISAT, Holguín, Cuba), Marta Mirazon Lahr and Maggie Bellatti (Duckworth Laboratory, LCHES, University of Cambridge), Edwin Crespo Torres (Laboratorio de Antropología Forense y Bioarqueología, Universidad de Puerto Rico, Río Piedras), Menno Hoogland and Andrea Waters-Rist (Laboratory for Human Osteoarchaeology, Leiden University), the director and staff (Musée Edgar Clerc, Guadeloupe), Jorge Ulloa Hung, Clenis Tavarez Maria, and Cristian Martínez Villanueva (Museo del Hombre Dominicano, Dominican Republic), Barbara Teßmann and the Berliner Gesellschaft für Anthropologie, Ethnologie und Urgeschichte (Museum für Vor- und Frühgeschichte, Berlin), Michele Morgan, Olivia Herschensohn, and Jane Rousseau (Peabody Museum of Archaeology

and Ethnology, Harvard), and last but certainly not least David Hunt (Smithsonian Institution, Washington DC).

The web of the Caribbean Research Group has expanded across seas and oceans to encompass a large number of scholars and friends, all of whom I am indebted to, yet I would be remiss if I failed to mention several colleagues in particular. Menno Hoogland has been an important source of inspiration and knowledge on Caribbean osteology since the start of my academic career. My first introduction to Caribbean archaeology were pretty palm trees and sunny beaches in a presentation by Arie Boomert. Thank you for that persuasive argument and all your great advice since. Roberto Valcárcel Rojas and Jorge Ulloa Hung have gone out of their way to assist me during fieldwork in Cuba and the Dominican Republic and have readily shared their of knowledge on the archaeology of the Greater Antilles.

Hayley Mickleburgh has not just provided important scientific advice and guidance, but has also been great company during data collection and conferences in the Caribbean and abroad. It has certainly taught us that wine should never be made using raisins and you should always bring a bit of Old Amsterdam just in case.

Rachel Schats has been instrumental in keeping me sane throughout my studies through the medium of great food and even better company. Despite your incomprehensible preference for salty over sweet, I hope we will share countless more meals and experiences.

Caribbean archaeology also introduced me to the other significant A: Amanda. Thank you for introducing me to the Big Apple, Hamilton, and tons of other great stuff. I can't wait for the next A&A adventure.

Finally, I must thank my family for their help and support through the years. I can only hope you will forgive me the ultimate faux-pas of switching languages mid-text to thank them properly.

Pap en mam! Wat is het verschrikkelijk moeilijk om de juiste woorden te vinden om jullie te bedanken. Jullie zijn er altijd voor me geweest en hebben elk plan - hoe gek ook! - ondersteund. Dat jullie altijd vertrouwen in me hebben gehad, ook als ik dat zelf wel eens kwijt was, heeft me in staat gesteld mijn dromen waar te maken. Zonder jullie was dit proefschrift er niet geweest!

Toch is dit proefschrift niet opgedragen aan jullie, maar aan mijn nichtjes Sara en Emma. Ik hoop dat jullie, net als ik, onbevreesd jullie dromen kunnen najagen en de wereld een beetje mooier kunnen kleuren!

“Another train...”
