Title: Wave propagation in mechanical metamaterials

Date: 2017-10-17

WAVE PROPAGATION IN MECHANICAL METAMATERIALS

PROEFSCHRIFT

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolkers,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 17 oktober 2017
klokke 10.00 uur

door

Yujie Zhou

geboren te HANGZHOU, CHINA in 1987

Promotor: prof. dr. V. Vitelli
Promotiecommissie: prof. dr. C. W. J. Beenakker
prof. dr. E. R. Eliel
dr. M. Fruchart
dr. W. T. M. Irvine (University of Chicago)
prof. dr. H. Schiessel

Casimir PhD series 2017-32

ISBN 978-90-8593-316-8

An electronic version of this thesis is available at the Leiden University Repository (<https://openaccess.leidenuniv.nl>).

The research done for this thesis was conducted at the Lorentz Institute, Leiden University. The author was sponsored by the China Scholarship Council (CSC).

The cover shows a sketch originally produced in the research process of this thesis. The sketch is a twisted kagome lattice with the twisting angle $\theta = 45^\circ$. The arrows indicate one of the four finite-frequency vibrational modes at the four-band crossing at the Γ point in Fig. 4.9. Some zigzag lines along three directions are marked in the colors of red, green, and blue. These lines give a hint to the physical reason for the doubly degenerate band structure.

The colored lines were drawn freehand on a piece of paper printed with a kagome framework. They were drawn by the author and dr. M. Fruchart during a discussion. The source code for the framework and mode analysis is credited to dr. J. Paulose.

Contents

1	Introduction	1
1.1	Topological mechanical metamaterials	3
1.2	Outline of this thesis	10
2	Kink-antikink asymmetry in topological mechanical chains	13
2.1	Introduction	13
2.2	Discrete model	17
2.3	Continuum theory	20
2.4	Linear modes	25
2.5	Nonlinear dynamics	29
2.A	Complex notation	35
2.B	Vibrational modes of prestressed mechanical structures . . .	36
2.C	Simulation methods	39
2.D	Peierls-Nabarro potential barrier via continuum theory . . .	40
3	Topological rotor chains with impurities	43
3.1	Spring stiffness impurities	43
3.2	Spring length impurities	49
3.A	Convention of kink coordinates in discrete models	57
4	Twisted kagome lattices: band structure analysis	59
4.1	What is a kagome lattice	59
4.2	Lattice dynamics of kagome lattices	62
4.3	Influence of the twist: the band gap opens up	66
4.4	Symmetry of twisted kagome lattices	66

4.5	Critical twisting angle: double degeneracy	70
5	Defects in twisted kagome lattices: gap modes	73
5.1	A single defect: localized gap modes	73
5.2	A pair of defects: the tight-binding theory	75
5.3	Towards multiple defects	80
6	Elastic waves in flexible strings	83
6.1	Introduction	83
6.2	Lattice model and simulation	84
6.3	Continuum theory	87
6.4	Outlook	90
