Cover painting and design: Yang Lili, Zhou Jinglong
Cover painting: Human beings and nature are in harmony. In humility, we are grateful to make use of the materials (zebrafish, butterfly, orchid, wood, etc.) that nature offers for our research. Indeed, the output of this research improves our living conditions.

Shape Analysis for Phenotype Characterisation from High-throughput Imaging

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 17 oktober 2017
klokke 15.00 uur

door

Yuanhao Guo

geboren te Jinan, China
in 1986

Promotiecommissie

Promoteres: prof. dr. ir. F.J. Verbeek
 prof. dr. H.J. van den Herik

Overige leden: prof. dr. T. Bäck
 prof. dr. T. Gevers (University of Amsterdam)
 prof. dr. H.P. Spaink
 prof. dr. H. Trautmann (University of Münster)

Yuanhao Guo was financially supported through the China Scholarship Council (CSC) to participate in the PhD programme of Leiden University. Grant number 201206220108.

The research reported in this thesis was partially funded by the Netherlands Organisation for Scientific Research (NWO), under grant number 834.14.001.

SIKS Dissertation Series No. 2017-36.

The research reported in this thesis has been carried out under the auspices of SIKS, the Dutch Research School for Information and Knowledge Systems.

Contents

1	Introduction	1
1.1	Importance of shape	2
1.2	High-throughput imaging	3
1.3	Model organism	4
1.4	Problem statement and research questions	4
1.5	Research methodology	8
1.6	Thesis structure	10
2	A Hybrid Segmentation Method for 2D Shape Description	13
2.1	2D shape description	15
2.2	Related work and background	19
2.3	A hybrid method for zebrafish segmentation	23
2.3.1	Mean shift algorithm and the segmentation candidate . . .	23
2.3.2	Hybrid of level set method and accelerated initialisation .	25
2.3.3	Hybrid of the segmentation candidates	27
2.4	Experiments	28
2.4.1	Data collection	29
2.4.2	Evaluation of different methods	30
2.4.3	Inspection of results by visualisation	32
2.5	Chapter conclusions and future work	33
3	Shape-based 3D Reconstruction and 3D Measurements	37
3.1	3D shape description for zebrafish	39
3.2	Background and method motivation	42
3.3	Materials and methods	44
3.3.1	MM-HTAI architecture	44
3.3.2	Preprocessing and segmentation of the images	46
3.3.3	Camera model parameterisation	46

CONTENTS

3.3.4	Shape-based zebrafish 3D reconstruction	49
3.3.5	Camera system optimisation	50
3.4	Experimental results	52
3.4.1	Sampling of axial-views and volume for the experiments . .	52
3.4.2	Validation of the proposed method	52
3.4.3	Evaluations on zebrafish larvae	56
3.4.4	3D measurements on zebrafish larvae	60
3.5	Chapter conclusions and future work	63
4	A Novel 3D Reconstruction Approach	69
4.1	Improved 3D reconstruction	71
4.2	Background and related work	75
4.3	Dataset collection	77
4.4	Two-phase 3D reconstruction from axial-views	78
4.4.1	Improved 3D volumetric representation as confidence map	79
4.4.2	3D reconstruction as objective function optimisation . . .	81
4.5	Experiments	83
4.5.1	Visual inspection of the results on <i>Dataset A</i>	83
4.5.2	3D measurements for <i>Dataset A</i>	86
4.5.3	3D reconstruction and measurements of <i>Dataset B & C</i> . .	89
4.5.4	Evaluation on efficiency	92
4.6	Chapter conclusions and future work	93
5	Multi-modal 3D Reconstruction	95
5.1	Multi-modal 3D reconstruction	97
5.2	Our approach	98
5.2.1	Dataset collection	99
5.2.2	Shape-based 3D reconstruction	100
5.2.3	3D multi-models alignment and fusion	100
5.3	Experiments	102
5.3.1	Results visualisation	103
5.3.2	3D measurements for 3D multi-models	103
5.4	Chapter conclusions and future work	104
6	Case Study: Image Features and Classification Models	107
6.1	Graphical model for kinship recognition	109
6.1.1	Kinship recognition using faces	109
6.1.2	Previous work	111

6.1.3	Graphical model for kinship recognition	113
6.1.4	New datasets	116
6.1.5	Experimental Results	119
6.1.6	Section conclusions and future work	122
6.2	Image based taxonomy using CNN	123
6.2.1	Image based taxonomy	123
6.2.2	Image based taxonomy using CNN architecture	126
6.2.3	Experiments	129
6.2.4	Section conclusions and future work	133
7	Conclusions and Discussion	135
7.1	Answers to the six research questions	136
7.2	Answers to the general problem statement	139
7.3	Limitations and possible solutions	141
7.4	Future research	143
	References	145
	List of Abbreviations	161
	List of Figures	163
	List of Tables	165
	Summary	167
	Samenvatting	171
	Curriculum Vitae	175
	SIKS Dissertation Series (2011-2017)	177
