Title: The astrochemical factory: A solid base for interstellar reactions

Issue Date: 2017-12-18

The astrochemical factory
A solid base for interstellar reactions

N.F.W. Ligterink

The astrochemical factory

A solid base for interstellar reactions

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op maandag 18 december 2017
klokke 11.15 uur

door

Niels Frank Willem Ligterink

geboren te Woerden, Nederland
in 1989

Promotiecommissie

Promotores: Prof. dr. E.F. van Dishoeck
Prof. dr. H. Linnartz

Overige leden: Prof. dr. J. Cernicharo (*Instituto de Ciencia de Materiales de Madrid*)
Prof. dr. P. Caselli (*Max Planck Institute for Extraterrestrial Physics*)
Dr. P.A Gerakines (*NASA Goddard Space Flight Center*)
Prof. dr. Paul van der Werf (*University of Leiden*)
Prof. dr. Huub Röttgering (*University of Leiden*)

Table of contents

1. Introduction	1
1.1. Forming an icy dust grain	3
1.2. Energetic processing of ices	6
1.2.1. Types of energetic processes	6
1.2.2. Laboratory investigations	7
1.2.3. Chemical modelling	9
1.3. Observing ice chemistry in the gas phase	10
1.3.1. Hot cores and corinos	10
1.3.2. Observations	11
1.4. Snowlines and non-thermal ice desorption	13
1.5. Icy rocks	14
1.6. This thesis	15
2. CryoPAD2 experimental set-up	19
2.1. Introduction	20
2.2. Description of CryoPAD2	22
2.3. Calibrations	25
2.3.1. QMS work function	25
2.3.2. QMS filament output correction	26
2.3.3. Column density and RAIRS correction	27
2.3.4. VUV photon flux	29
2.4. An experimental example	30
2.4.1. Introduction	30
2.4.2. Experimental	30
2.4.3. Results	30
2.4.4. Discussion	34
2.4.5. Conclusion	35
3. Controlling the emission of a Vacuum-UV lamp	37
3.1. Introduction	38
3.2. Experimental	39
3.2.1. Microwave discharge hydrogen-flow lamp	39
3.2.2. Greifswald UV/VUV spectrometer	40
3.2.3. Photon flux measurements	42
3.2.4. CryoPAD2	43
3.3. Results	44
3.3.1. Photon flux	44
3.3.2. H ₂ pressure dependence	44
3.3.3. Mixtures and different gasses	45
3.3.4. MDHL power dependence	46
3.3.5. Pumping efficiency in F- and T-type MDHLs	48
3.3.6. Distance dependence	49
3.3.7. Practical issues	50

3.3.8. CO photodepletion measurements	53
3.4. Conclusions	55
4. Methanol ice co-desorption to explain cold gas-phase methanol	57
4.1. Introduction	58
4.2. Experimental setup and results	60
4.2.1. Laboratory set-up and protocols	60
4.2.2. Experimental results	62
4.3. Modelling	66
4.3.1. Astrochemical model description	66
4.3.2. Astrochemical model results	68
4.4. Conclusions	72
5. IR spectra of frozen complex organic molecules	75
5.1. Introduction	76
5.2. Experimental	79
5.2.1. Set-up	79
5.2.2. Measurement protocol	79
5.2.3. Analysis protocol	80
5.3. Results and Discussion	80
5.3.1. Acetaldehyde	83
5.3.2. Ethanol	86
5.3.3. Dimethyl ether	86
5.4. COM ice features in W33A	87
5.5. Conclusions	90
6. An observational and laboratory study of CH₃NCO	91
6.1. Introduction	92
6.2. Observations	94
6.2.1. The ALMA PILS survey	94
6.2.2. Results	95
6.3. Laboratory experiments	100
6.3.1. Set-up and method	100
6.3.2. Results – IR Spectra	102
6.3.3. Results – temperature programmed desorption	103
6.4. Linking observations and laboratory data	106
6.5. Conclusions	106
6.6. Appendix	107
6.6.1. Line list	107
6.6.2. CH ₃ NCO $v_b=1$	109
6.6.3. $m/z = 56, 57$ and 58 upon VUV irradiation of pure CH ₄ and HNCO samples	109
7. Formation of amides in interstellar relevant ices	111
7.1. Introduction	112
7.2. Experimental	114
7.2.1. Setup and protocol	114
7.2.2. Data analysis	115
7.2.3. Fragmentation patterns and desorption temperatures	117

7.3.	Results	119
7.3.1.	Identification of the main products	119
7.3.2.	Comparison between experimental conditions	127
7.4.	Discussion	128
7.4.1.	Key reactions and reaction network	128
7.4.2.	Comparison with interstellar abundance ratios	130
7.5.	Conclusions	132
8.	Search for methylamine in high mass hot cores	133
8.1.	Introduction	134
8.2.	Observations	135
8.3.	Data analysis	137
8.4.	Results	139
8.4.1.	CH ₃ NH ₂ limits	139
8.4.2.	Abundance ratio comparison	140
8.5.	Discussion	142
8.5.1.	CH ₃ NH ₂	144
8.5.2.	NH ₂ CHO	145
8.5.3.	CH ₃ CN	145
8.5.4.	Prospects for ALMA	146
8.6.	Conclusions	146
8.7.	Appendix	148
8.7.1.	Transitions of methylamine and other molecules	148
8.7.2.	ALMA	151
9.	Small -NH₂ and NO molecules towards IRAS 16293-2422B	153
9.1.	Introduction	154
9.2.	Observations and data analysis	155
9.3.	Results	156
9.4.	Astronomical implications	160
9.5.	Appendix	161
9.5.1.	Spectroscopic data	161
9.5.2.	Additional fit spectra of CH ₂ NH and NO	162
9.5.3.	Upper limit column densities of NH ₂ OH and CH ₃ NH ₂	163
10.	Interstellar bromine depletion matches cometary ices from <i>Rosetta</i>	165
10.1.	Introduction	166
10.2.	Data	166
10.2.1.	Spectroscopy of HBr and HBr ⁺	166
10.2.2.	Archival <i>Herschel</i> observations and selected sources	167
10.2.3.	Analysis method	167
10.3.	Search for HBr and HBr ⁺ in the <i>Herschel</i> spectra	169
10.4.	Protostellar <i>vs</i> cometary abundance	169
10.5.	Interstellar chemistry of Br	170
10.5.1.	Chemical modelling results	172
10.6.	Conclusions	173
10.7.	Appendix	174
10.7.1.	Linelist of HBr transitions in range of HIFI	174
10.7.2.	Sgr B2(N) and NGC6334I at 500 GHz	175

10.7.3. Upper limit column densities of $\text{H}^{79+81}\text{Br}$ and column densities of reference molecules	176
