Author: Clauwens, B.J.F.
Title: Resolving the building blocks of galaxies in space and time
Issue Date: 2017-12-06

Resolving the building blocks of galaxies in space and time

De opbouw van sterrenstelsels in ruimte en tijd

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 6 december 2017
klokke 13:45 uur

door

Bartolomeüs Johannes Firmin Clauwens
geboren te Veghel
in 1981

Promotores:	Prof. dr. J. Schaye	
	Prof. dr. M. Franx	
Promotiecommissie:	Prof. dr. P. van Dokkum	(Yale University, New Haven, U.S.A.)
	dr. P. A. Torrey	(MIT, Cambridge, U.S.A.)
	Prof. dr. S. C. Trager	(Rijksuniversiteit Groningen)
	dr. C. A. Correa	
	Prof. dr. E. R. Eliel	
	Prof. dr. H. J. A. Röttgering	

Casimir PhD series, Delft-Leiden 2017-43
ISBN: 978-90-8593-327-4
An electronic version of this thesis can be found at https://openaccess.leidenuniv.nl.

The work described in this thesis is part of the Leiden de Sitter Cosmology program that is funded by the Netherlands Organisation for Scientific Research (NWO).

Omslagontwerp: Bart Clauwens. The cover image is based on a picture of Messier 101, which is comprised of 51 individual exposures with the Hubble Space Telescope in addition to ground-based observations from the Canada France Hawaii Telescope and the National Optical Astronomy Observatory. Credit for Hubble Image: NASA, ESA, K. Kuntz (JHU), F. Bresolin (University of Hawaii), J. Trauger (Jet Propulsion Lab), J. Mould (NOAO), Y.-H. Chu (University of Illinois, Urbana), and STScI. Credit for CFHT Image: Canada-France-Hawaii Telescope/ J.-C. Cuillandre/Coelum. Credit for NOAO Image: G. Jacoby, B. Bohannan, M. Hanna/ NOAO/AURA/NSF. For artistic purposes I have inverted the colours in the image, thus making the black background appear white and the light-blue star-forming regions appear dark-brown.

Contents

1 Introduction **1**
1.1 The study of galaxy formation 1
1.1.1 Galaxies 1
1.1.2 The building blocks of galaxies 2
1.2 This thesis 11
1.2.1 Chapter 2: An assessment of the evidence from ATLAS^{3D} for a variable initial mass function 11
1.2.2 Chapter 3: Implications of a variable IMF for the interpretation of observations of galaxy populations 12
1.2.3 Chapter 4: A large difference in the progenitor masses of active and passive galaxies in the EAGLE simulation . . . 12
1.2.4 Chapter 5: The average structural evolution of massive galaxies can be reliably estimated using cumulative galaxy number densities 13
1.2.5 Chapter 6: The three phases of galaxy formation 14

2 An assessment of the evidence from ATLAS^{3D} for a variable initial mass function **17**
2.1 Introduction 18
2.2 The ATLAS^{3D} Survey 20
2.3 The ATLAS^{3D} evidence for a non universal IMF 21
2.4 Correlations with the IMF mismatch parameter 29
2.5 Galaxy Stellar Mass Function and mass completeness 31
2.6 Mass completeness effects on the IMF dispersion trend 33
2.7 Distance effects and SBF calibration 36
2.8 Conclusions 46

3 Implications of a variable IMF for the interpretation of observations of galaxy populations 51
3.1 Introduction . . . 52
3.2 Method . . . 56
3.2.1 The Vazdekis IMF . . . 56
3.2.2 The matched low-end IMF . . . 60
3.2.3 Star formation rates . . . 63
3.2.4 Stellar masses . . . 65
3.3 Star Formation Main Sequence . . . 67
3.4 Galaxy Stellar Mass Function . . . 73
3.5 Metals . . . 77
3.6 Rapid Galaxy Quenching . . . 81
3.7 Conclusions . . . 83
3.8 Appendix . . . 86

4 A large difference in the progenitor masses of active and passive galaxies in the EAGLE simulation 91
4.1 Introduction . . . 91
4.2 Simulation . . . 93
4.3 Results . . . 95
4.4 Conclusions . . . 102

5 The average structural evolution of massive galaxies can be reliably estimated using cumulative galaxy number densities 105
5.1 Introduction . . . 105
5.2 Method . . . 107
5.3 Results . . . 110
5.4 Comparison with observations . . . 113
5.5 Conclusions . . . 115

6 The three phases of galaxy formation 119
6.1 Introduction . . . 119
6.2 The EAGLE simulation . . . 123
6.3 Kinematic morphology . . . 124
6.4 Morphology evolution . . . 128
6.5 The origin of bulge stars . . . 133
6.6 The effects of star formation and mergers on morphology . . . 135
6.7 The merger contribution to spheroid and disk formation rates . . . 138
6.8 Conclusions . . . 143
6.9 Appendix A . . . 146

6.10 Appendix B 146

7 Samenvatting in het Nederlands **150**
7.1 De vorming van sterrenstelsels 150
7.1.1 Sterrenstelsels 150
7.1.2 De bouwstenen van sterrenstelsels 151
7.2 Dit proefschrift 157
7.2.1 Hoofdstuk 2: Een analyse van het bewijs van ATLAS^{3D} voor een variabele initiële massa functie 157
7.2.2 Hoofdstuk 3: Implicaties van een variabel IMF voor de interpretatie van waarnemingen van populaties van sterrenstelsels 158
7.2.3 Hoofdstuk 4: Een groot verschil in de progenitor massa's van actieve en passieve sterrenstelsels in de EAGLE simulatie 158
7.2.4 Hoofdstuk 5: De gemiddelde structurele evolutie van massieve sterrenstelsels kan op een betrouwbare manier bepaald worden op basis van cumulatieve getals-dichtheden van sterrenstelsels. 159
7.2.5 Hoofdstuk 6: De drie fases in de vorming van sterrenstelsels 160
