TABLE OF CONTENTS

Ischemia/reperfusion injury: a metabolic meltdown

Chapter 1	General introduction and outline of thesis	7
PART I		
PATHOPHYSIOLOGY OF ISCHEMIA/REPERFUSION INJURY		
Chapter 2	The hypoxanthine – xanthine oxidase - axis: key driver of clinical ischemia/reperfusion injury?	21
Chapter 3	Succinate accumulation and ischemia/reperfusion injury: of mice but not men – A study in renal ischemia reperfusion.	41
Chapter 4	Defective post-reperfusion metabolic recovery directly associates with incident delayed graft function.	55
Chapter 5	An immediate post-reperfusion metabolic collapse associates with ischemia/reperfusion injury in the context of clinical kidney transplantation.	89
PART II		
CLINICAL TRANSLATION		
Chapter 6	Realistic restrictions in cold ischemia time result in similar outcomes for kidneys donated after brain and cardiac death.	145
Chapter 7	Mitochondrial restoration precedes functional recovery of the dysfunctioning graft after clinical kidney transplantation.	165
Chapter 8	Impaired reactive aldehyde metabolism is associated with delayed graft function in human kidney transplantation.	181
Chapter 9	Short vs. prolonged statin therapy differentially affects the myocardial response to injury after cardiac surgery: The PreOperative STatin InterVEntion trial.	209
Chapter 10	Donor pretreatment in clinical kidney transplantation: a critical appraisal.	225
PART III		
Chapter 11	Summary and future perspectives	247
