Title: Astrophysical plasma modeling of the hot Universe : advances and challenges in high-resolution X-ray spectroscopy

Date: 2018-06-07

Astrophysical plasma modeling of the hot Universe

Advances and challenges
in high-resolution X-ray spectroscopy

Astrophysical plasma modeling of the hot Universe

Advances and challenges
in high-resolution X-ray spectroscopy

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus prof. mr. C. J. J. M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 7 juni 2018
klokke 10:00 uur

door

Junjie Mao

geboren te Ningbo, China
in 1988

Promotiecommissie:

Promotor:

Prof. dr. J. S. Kaastra

Co-promotor:

Dr. J. de Plaa (SRON)

Overige leden:

Prof. dr. H. Röttgering

Prof. dr. J. Schaye

Prof. dr. W. R. Jaffe

Prof. dr. G. Branduardi-Raymont (University College London)

Prof. dr. F. B. S. Paerels (Columbia University)

To Lilan
our active family nucleus
with her inflows
and outflows

Contents

1	Introduction	1
1.1	Hot astrophysical plasmas in X-rays	2
1.2	Active Galactic Nuclei and circumnuclear media	3
1.3	Intracluster media and chemical enrichment	9
1.4	Plasma code and atomic data	13
1.5	This thesis	15
	References	18
2	Parameterization of the level-resolved radiative recombination rate coefficients for the SPEX code	21
2.1	Introduction	22
2.2	Historical background	22
2.3	RR rate coefficients for H-like ions	25
2.3.1	Photoionization cross sections	25
2.3.2	Radiative recombination data	26
2.4	RR rate coefficients for He-like to Na-like ions	26
2.5	Fitting strategy	27
2.6	Results and discussion	28
2.6.1	Total RR rates	28
2.6.2	Level-resolved RR rate coefficients	28
2.7	Summary	30
	References	30
3	The electron energy loss rate due to radiative recombination	33
3.1	Introduction	35
3.2	Methods	37
3.2.1	Cross sections	37
3.2.2	Rate coefficients	38
3.3	Results	39
3.3.1	Parameterization	41
3.4	Discussions	45
3.4.1	Comparison with previous results	45
3.4.2	Scaling with z^2	51
3.4.3	Radiative recombination continua	51
3.4.4	Total radiative recombination rate	56
	References	57

4	Density diagnostics of ionized outflows in active galactic nuclei: X-ray and UV absorption lines from metastable levels in Be-like to C-like ions	59
4.1	Introduction	61
4.2	Methods	63
4.3	Results	63
4.3.1	Be-like	63
4.3.2	B-like	69
4.3.3	C-like	69
4.3.4	Summary	73
4.4	Discussion	76
4.4.1	Ionization parameter dependence	76
4.4.2	Domain of density and ionization parameter diagnostics	79
4.5	Density diagnostics for the ionized outflow in NGC 5548	80
4.A	N-like Fe XX to F-like Fe XVIII	84
4.B	Comparison of the level population calculation with CHIANTI	89
	References	91
5	Anatomy of the AGN in NGC 5548: IX. Photoionized emission features in the soft X-ray spectra	93
5.1	Introduction	95
5.2	Observations and data reduction	98
5.3	Spectral analysis and results	98
5.3.1	Phenomenological local fit	99
5.3.2	Physical global fit	100
5.4	Discussion	109
5.4.1	In relation to the optical NELR	109
5.4.2	In relation to the X-ray warm absorber	112
5.4.3	Unobscured SED for the X-ray emitter	114
5.4.4	Charge exchange component?	116
5.5	Summary	116
	References	117
6	Photoionized emission and absorption features in the high-resolution X-ray spectra of NGC 3783	121
6.1	Introduction	122
6.2	Observations and data reduction	123
6.3	Spectral analysis	124
6.3.1	Optical to X-ray spectra construction	126
6.3.2	Description of model components	127
6.4	Results and discussions	129
6.4.1	Intrinsic broadband SED of the AGN	129
6.4.2	Warm absorber	132
6.4.3	X-ray photoionized emitter	137
6.4.4	Variability of the X-ray emission features	142
6.4.5	Summary	146

6.5	Conclusions	148
6.A	Component relation in fitting the spectra using SPEX	148
	References	149
7	Nitrogen abundance in the X-ray halos of clusters and groups of galaxies	153
7.1	Introduction	154
7.2	Data reduction	156
7.3	Spectral analysis	156
7.4	Results and comparison with literature values	158
7.5	Discussion	162
	7.5.1 ICM Chemical enrichment	162
	7.5.2 Origin of nitrogen enrichment	166
	7.5.3 Odd-Z elements	172
7.6	Conclusions	175
7.A	Global spectral fit	180
7.B	Systematic uncertainties in spectral analysis	182
	7.B.1 Differential emission measure distribution	182
	7.B.2 Spatial broadening model	182
	7.B.3 RGS background model	186
7.C	EPIC spectral analysis of NGC 5044 with SPEX v3.03	188
7.D	IMF weighted SNcc yields and yields of SNIa	189
	References	189
	Summary	195
	Samenvatting	199
	Curriculum Vitæ	203
	List of Publications	205
	Acknowledgements	207
