Acknowledgements

I would like to thank my promoter Christine Mummery, for all her support in finishing my thesis. I would like to thank my mentor Chad Cowan, for his supervision during all my research work and his dedication to setting me up for future scientific success.
I would also like to thank the committee for helping to build the next generation of scientists.

For teaching me the beginnings of stem cell biology I would like to thank YounKyoung Lee, as well as Fang Xia for her support in the lab. I would also like to thank Ray Camahort, Ludivine Challet-Meylan, Robert Schinzel and Tim Ahfeldt for their friendship and encouragement in the lab. I want to express my gratitude to Curtis Warren, Takafumi Toyohara and Haojie Yu for their work in the lab and scientific discussions. I would also like to acknowledge my students, Rainjade Chung, Umji Lee and Margaret Irwin for their labor in the lab.

Without an amazing support system this thesis would not have been possible, and I would like to extend my thanks to Leo Ferreira, Tom Mekenkamp, Bas van den Berg, Stephanie Regan, Anita van der Zwan, Stanley Tam, Gordon Alemao, and most notably Kiwi Florido.

Lastly, I would like to thank my parents, for their love and support to pursue my dreams, and allowing me to spread my wings anywhere in the world.
