This PhD project was performed within TREND (Trauma Related Neuronal Dysfunction), a Dutch Consortium that integrated research on epidemiology, assessment technology, pharmacotherapeutics, biomarkers and genetics on Complex Regional Pain Syndrome type 1. TREND was supported by an unrestricted grant from the Dutch Ministry of Economic Affairs (BSIK03016).

Financial support for this thesis has kindly been provided by the Patiëntenvereniging Complex Regionaal Pijn Syndroom.

## Contents

<i>Chapter 1</i>	General introduction	7
<i>Chapter 2</i>	Motor consequences of experimentally induced limb pain: A systematic review	17
<i>Chapter 3</i>	Deficient muscle activation in patients with Complex Regional Pain Syndrome and abnormal hand postures: An electromyographic evaluation	61
<i>Chapter 4</i>	Motor dysfunction of Complex Regional Pain Syndrome is related to impaired central processing of proprioceptive information	89
<i>Chapter 5</i>	Force modulation deficits in Complex Regional Pain Syndrome: A potential role for impaired sense of force production	119
<i>Chapter 6</i>	Evaluation of mirrored muscle activity in patients with Complex Regional Pain Syndrome	149
<i>Chapter 7</i>	Intended and unintended coupling between the affected and unaffected upper limb in Complex Regional Pain Syndrome	169
<i>Chapter 8</i>	Summary, conclusions and future perspectives	201
<i>Chapter 9</i>	Samenvatting, conclusies en perspectieven	219
