Curriculum Vitae
First of all, I would like to thank all the participants in this project. Without their cooperation this research would have not been possible.

I greatly appreciate the help of colleagues K.P.M Wijk-Kerssemakers, F. Tabeling, R. Jonquière, H. van Andel in supplying the AD patients, R. de Winter in supplying the MD patients, J. Schijf, M.M. van Deemter for the data gathering of patients from the Brijder Stichting, Mrs J. Schouten-Verhagen, Miss J. Schouten, J. Colijn, Mrs C. den Dekker-De Best, and Miss J. Turfboer for the lab measurements, A.H. Zwinderman, E. Pennings and B.Mertens for their statistical advice. Mrs S. Koning for typing several manuscripts and W. Dijksma for taking the photographs. I am particularly grateful to Miss M.M. van Deemter who based her master’s thesis on part of the current study.

Curriculum Vitae

Karel Jozef Bemelmans was born on the 6th of June 1943 in Kerkrade. After receiving his H.B.S.-B diploma by means of State Exam in 1968, he studied two years of civil engineering before switching to Psychology at the University of Nijmegen where he did undergraduate work until 1973. His graduate work was done at the Department of Clinical Psychology at the University of Leiden where he graduated in 1977, specializing in the field of Neuropsychology. As a neuropsychologist he worked for thirty years at the Psychiatric Hospital ‘Endegeest’, in Oegstgeest, which is now part of a greater conglomerate called ‘Rivierduinen’. At that time Endegeest was only a peripheral psychiatric hospital with a high interest in biological psychiatric research. To this end it had departments of genetics, electronmicroscopy, and electroencephalography (EEG), neuropathology and biochemistry. After having spent several years of research on the EEG as a psychiatric diagnostic, he focussed on cognitive psychology and in particular the theoretical significance of serial position effects, of which this thesis is a product.
