SEARCH FOR NEW BREAST CANCER SUSCEPTIBILITY GENES

PROEFSCHRIFT

Ter verkrijging van de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P.F. van der Heijden,
volgens besluit van het College voor Promoties te verdedigen
op donderdag 29 mei 2008 klokke 15:00 uur

door Rogier Abel Oldenburg

geboren te Lower Hutt, Nieuw Zeeland in 1968

PROMOTIECOMMISSIE

Promotores

Prof. Dr. P. Devilee

Prof. Dr. E.J. Meijers-Heijboer (VU Medisch Centrum, Amsterdam)

Prof. Dr. C.J. Cornelisse

Referent

Prof. Dr. M.R. Stratton (Institute of Cancer Research, London, UK)

Overige Leden

Prof. J.G.M. Klijn (Erasmus Medical Centre, Rotterdam)

Dr. P.M. Nederlof (Nederlands Kanker Instituut, Amsterdam)

CONTENTS

1. Aims and Outline of the thesis	9
2. General Introduction	11
1. Background	11
2. Breast cancer risk factors	12
2.1. Ethnicity, gender and age	12
2.2. Hormonal factors	12
2.3. Other risk factors	15
2.3.1. Breast density	15
2.3.2. Benign breast disease	15
2.3.3. Radiation	15
2.4. MMTV	16
2.5. Family history	17
3. Known breast cancer susceptibility genes	17
3.1. High-risk breast cancer susceptibility genes	18
3.1.1. BRCA1 and BRCA2	18
3.1.2. TP53 (Li-Fraumeni Syndrome)	23
3.1.3. PTEN (The Cowden syndrome)	25
3.1.4. LKB1/STK11 (Peutz-Jegher Syndrome)	26
3.1.5. CDH1/E-Cadherin (HDGC-syndrome)	27
3.2. Low to moderate-risk breast cancer susceptibility genes	28
3.2.1. ATM	28
3.2.2. TGF β 1	29
3.2.3. CASP8	30
3.2.4. CHEK2	31
3.2.5. BARD1	32
3.2.6. The Fanconi Pathway other than FANCD2 (BRIP1 and PALB2)	33
4. Genetics of familial breast cancer	34
4.1. Attributable risks	34
4.2. Segregation analyses	35
4.3. Linkage analyses	36
5. Tumor characteristics	39
5.1. Pathology	39
5.2. Loss of heterozygosity	39

5.3.	Comparative genome hybridisation (CGH)	40
5.4.	Immunophenotype, global gene expression	41
3.	Putative Candidate Genes	45
3.1.	Extending the p16-Leiden tumour spectrum by respiratory tract tumours. <i>J Med Genet. Mar; 41(3):e31. (2004)</i>	45
3.2.	The CHEK2*1100delC variant acts as a breast cancer risk modifier in non-BRCA1/BRCA2 multiple-case families. <i>Cancer Res. Dec 1; 63(23):8153-7. (2003)</i>	55
3.3.	Evaluation of linkage of breast cancer to the putative BRCA3 locus on chromosome 13q21 in 128 multiple case families from the Breast Cancer Linkage Consortium. <i>Proc Natl Acad Sci USA. Jan 22; 99(2):827-31. (2002)</i>	69
4.	Molecular Profiling	81
4.1.	Characterization of familial non-BRCA1/2 breast tumors by loss of heterozygosity and immunophenotyping. <i>Clin Cancer Res. Mar 15; 12(6):1693-700. (2006)</i>	81
4.2.	BRCAx breast tumors are distinct from sporadic and BRCA1 tumors by array-CGH but still heterogeneous supporting the possibility for multiple etiologies. <i>Submitted</i>	101
5.	Linkage Searches	115
5.1.	A genome wide linkage search for breast cancer susceptibility genes. <i>Genes Chromosomes Cancer. Jul; 45(7):646-55. (2006)</i>	115
5.2.	Genome-wide linkage scan in Dutch hereditary non-BRCA1/2 breast cancer families identifies 9q21-22 as a putative breast cancer susceptibility locus. <i>Submitted</i>	133

6.	Does the BRCA1 gene exist? Future outlook	151
7.	Summary	159
8.	Samenvatting	167
9.	Publication list	177
10.	Curriculum vitae	179
11.	References chapter 2 and 6	181
