Make it and Break it: the cycles of pottery

A study of the technology, form, function, and use of pottery from the settlements at Uitgeest-Groot Dorregeest and Schagen-Muggenburg 1, Roman period, North-Holland, the Netherlands.

A.A. Abbink
In memory of my parents
1 Introduction 23
1.1 Background 23
1.2 Pottery analysis in archaeology 24
1.2.1 Stylistic research 24
1.2.2 Technological research 24
1.2.3 Studies of vessel use and ceramic inventories 25
1.2.4 Studies of pottery from the Roman period in the Netherlands 26
1.2.5 Relevance to this study 26
1.3 Theoretical background 27
1.3.1 General concepts of structuration theory 27
1.3.2 Time, space, and context in practices 29
1.3.3 Material culture 30
1.4 Structuration theory and archaeological research 30
1.4.1 Discussion 30
1.4.2 Structural analysis of material culture 31
1.5 Pottery, society, and culture; outline of the research model 34
1.5.1 The cycles of pottery 34
1.5.2 Research questions 37
1.5.3 Methodology 38
1.5.4 The structure of the content 39

2 Pottery, society, and culture 41
2.1 Introduction 41
2.2 The making of pottery 41
2.2.1 General aspects 41
2.2.2 Aspects of style in the production process 43
2.3 Function, use, and discard variables 43
2.3.1 General aspects of function and use 45
2.3.2 Ethnographic and ethnoarchaeological evidence on function 45
2.3.3 Ethnographic and ethnoarchaeological evidence on use- and break-frequency 49
2.3.4 Depositional practices and accumulation studies 49
2.3.5 Depositional practices in settlements in North-Holland in the Roman period 50
2.4 The manufacturing proces 50
2.4.1 Selection of raw materials and the preparation of a paste 51
5.3 Quartz particles 118
5.3.1 Methods 118
5.3.2 Results 119
5.4 Fabric types 119
5.4.1 Relations between clay types, inclusions, and quartz 119
5.4.2 Fabrics of the test clays and the pottery 121
5.4.3 Summary and conclusions 123

6 Fabric: temper and firing properties 125
6.1 Introduction 125
6.2 Test tablets with organic temper 126
6.2.1 Methods of preparation 126
6.2.2 The apparent porosity in the tablets of sets A, B, and C 127
6.2.3 Firing properties of tempered test tablets 133
6.2.4 Summary results 133
6.3 The type of organic temper 134
6.3.1 Comparison of pottery and test tablets 134
6.3.2 Botanical identification 134
6.4 The amount and size of organic temper in the pottery 135
6.4.1 Method of quantification 135
6.4.2 Quantities and sizes of temper in the pottery of Uitgeest 136
6.4.3 Quantities and sizes of temper in the pottery of Schagen 136
6.5 The volume of temper (vol%) in the pottery 137
6.5.1 Method of comparison 137
6.5.2 Areal Density and vol% in the sherds 137
6.6 Apparent Porosity measurements (%AP) 140
6.6.1 Results Uitgeest 140
6.6.2 Results Schagen 141
6.7 Discussion 141
6.8 Firing methods 147
6.8.1 Results 147
6.8.2 Maximum temperature and duration of firing 148
6.8.3 Conclusion 149

7 Fabric composition, Uitgeest Gr.D. and Schagen-M1 151
7.1 Clay and temper 151
7.1.1Fabrics Uitgeest 151
7.1.2 Fabrics Schagen 153
7.2 Summary and conclusion 154

8 Form, function, and use of ceramic containers 163
8.1 Introduction 163
8.1.1 Form and function; ideas and methodology 163
8.1.2 Pottery requirements of households in the settlements of Uitgeest and Schagen 164
8.2 Methods, variables, and sample composition 165
8.2.1 Sample composition 165
8.2.2 Measurements of size and proportion 168
8.2.3 Analysis of metric variables 168
8.2.4 Non-metric features 169
8.3 Analysis of size and shape, Uitgeest-Gr.D., sample 1 170
8.3.1 Dimensions of size variables 170
8.3.2 Dimensions of proportions 171
8.3.3 Size and shape relations 171
8.3.4 Classification of the pottery 173
8.3.5 Characteristics of the pottery groups 174
8.4 Analysis of size and shape, Uitgeest-Gr.D. sample 2 198
8.4.1 Dimensions of size and shape 198
8.4.2 Classification of the pottery 198
8.5 Size and shape, Uitgeest-Gr.D. sample 1 and 2 199
8.6 Non-metric variables, Uitgeest-Gr.D. sample 1 204
8.6.1 Rim types: the construction of the rims 204
8.6.2 Handles 205
8.6.3 Treatment of the exterior surface 205
8.6.4 Relations between non-metric variables and pottery groups 206
8.7 Context of the pottery from Uitgeest-Gr.D. 207
8.8 Analysis of size and shape, Schagen-M1 235
8.8.1 Dimensions of size variables 235
8.8.2 Dimensions of proportions 235
8.8.3 Size and shape relations 235
8.8.4 Classification of the pottery 238
8.8.5 Characteristics of the pottery groups 238
8.9 Non-metric variables, Schagen-M1 240
8.9.1 Rim types 240
8.9.2 Handles 240
8.9.3 Treatment of the exterior surface 240
8.9.4 Relationships between non-metric variables and pottery groups 241
8.10 Vessel forms in Schagen 242
8.10.1 Feature context of the pottery 242
8.11 Vessel-forms in the samples from Uitgeest-Gr.D. and Schagen-M1 281
8.11.1 Similarities 281
8.11.2 Differences 282
8.11.3 The relation between formal groups and construction technology 283
8.11.4 Conclusions 283
8.12 Use alterations 285
8.12.1 Types of residue; methods of analyses 285
8.12.2 Soot and chars, Uitgeest 292
8.12.3 Cream-coloured residue (B1) and pigment (P), Uitgeest 294
8.12.4 All residues, Schagen 294
8.12.5 Mass spectrometry (CuPyMS) analysis of use residues 295
8.12.6 Relationships between use residues and formal groups 297
8.13 Interpretation: function of the pottery groups 299
8.13.1 Cooking 299
8.13.2 Storage 301
8.13.3 Containers for fluids 302
8.13.4 Special and multi-purpose vessels 304
8.13.5 ’Besmeten’ surfaces and the function of the pottery 305
8.14 Pottery groups and ritual deposition in Schagen-M1 305
8.14.1 The distribution of pottery in pits, associated with winter, spring, and fall rituals 306
8.14.2 The context of jars, other vessels with handles, and reduced ware 307
8.14.3 Pottery in features 143 (winter), 223 (winter) and 79 (spring) 308
8.14.4 Summary 310
8.15 Summary: form, function, and use of pottery 311
8.15.1 Function and use 312
8.15.2 Local production and local-regional distinctions 315
8.15.3 Comparison with two other pottery samples 318
8.15.4 Household inventories: an attempt at reconstruction 319

9 Fabric, form and function with an evaluation of methods 323
9.1 The relation between pottery groups and fabric composition 323
9.2 Fabrics and pottery groups, Uitgeest-Gr.D. sample 1 323
9.3 Schagen-MI 325
9.3.1 Fabrics and pottery groups 325
9.3.2 Fabrics for ritual and utilitarian functions 325
9.4 Summary 335
9.5 Evaluation of methods and criteria for fabric analysis 335
9.5.1 Methods to define clay types 336
9.5.2 Evaluation of the methods for estimating the amount of temper 336
9.6 Evaluation of methods for form, function and use 337

10 Conclusion: the cycles of pottery 339
10.1 Making the pottery 340
10.2 Use and deposition 346
10.2.1 Actual use 346
10.2.2 End of use: breaking and deposition 347
10.3 The social/cultural framework 348
10.4 Pottery studies: looking back to the future 349

Acknowledgements

For the completion of this study I am indebted to many people. First and foremost I thank Frans Wiegmans for all his help with the tedious practical work and his input in the development and trying out of new methods and techniques. Without him, I would have lost courage much more often. Secondly, I thank Sander van der Leeuw for his inspiration during my years as a student and Tineke Spruyt, who looked at pottery with the practical eyes of the potter. She thereby opened mine to the fact that most archaeologists have no idea about the practice of pottery making and because of this, no insight into the “logic” of the craft. I thank Bert Voorrips because he managed to cure me of my fear of computers and for his help with the statistical side of the analysis, as well as with the final editing of the text. Special thanks also go to Flip Wolterling who made this study possible to begin with, supported me throughout the process in many practical ways and secured the subsidy for publication, to Eulalia Colomer, who crossed my path at exactly the right time, to Peter van den Broeke, to Marian Diepeveen, and to Linda Therkorn. They provided the much needed discussion on the content of this book. I thank Linda for putting her creative interpretations of the Schagen settlement features at my disposal before publication.

Marian, whose friendship and enthusiasm for life and archaeology has so often been inspiring, helped me through the final stages and her close reading has definitely improved the content and structure of this book. Finally, I thank all other friends and colleagues who helped or inspired me in the periods when I felt like Sisyphus.

The State Service for Archaeological Research (ROB) and the provincial government of North-Holland financed this study from January 1984 to September 1985. The National Foundation for the advancement of Pure Scientific Research provided the means to employ Ms. Tineke Spruyt as part-time assistant for the restoration and technological analysis of the pottery from Schagen-Muggenburg-1 in 1986.

The test tablets of the Holocene clays were made by Dr. J.A. Brongers and Mr. E. Bolte (State Service for Archaeological Research), who also carried out the apparent porosity measurements and dilatometric analyses. The test tablets with temper were made by Lou Jacobs and Eric Mulder (Faculty of Archaeology, Leiden University), who also refired a large number of sherds. The excellent work of the following professionals is visible throughout this book, in alphabetical order: Menne Kosian (editor of plans and figures of Uitgeest); Joop Hulst (pottery drawings), Petra de Jong (editor of all SPSS and most other figures), Jan Paupit (photographer). All tables were made by Marjolijn Kok.

The publication was financed by the Department of Culture of the Provincial Government of North-Holland, through funds from the former Baron de Vos van Steenwijk Foundation.
"Time brings everything and dragging years alter names and forms, nature and even destiny"

Plato

This dissertation has a long history. The ideas were developed during 1981 to 1984, when I was employed as a research assistant at the State Service for Archaeological Research (ROB), to catalogue all finds from the excavation at Uitgeest-Groot Dorregeest. This large-scale excavation of a ‘native-Roman’ and Medieval settlement in the province of North-Holland yielded vast amounts of pottery. The settlement at Schagen was excavated by Therkorn as part of the Oer-Y estuary project of the Institute for Prae- and Protohistory of the University of Amsterdam. The study of indigenous pottery from the two settlements was started part-time with a grant of the Province of North-Holland. When in 1985 I was appointed to the University of Leiden as lecturer at the Institute of Prehistory, the progress was slowed down considerably and the rather ambitious scale had to be reduced. The many interruptions necessarily left their mark on the result. One consequence is that the references for the chapters dealing with fabrics are not up to date. This part of the research was basically closed in 1992. Another one is that the detailed analyses of construction and finishing techniques are here presented in a summary form only. The second part on the other hand, the analyses of vessel use in both practical and symbolic contexts has gained considerably in importance over the years, not in the least by the new and exciting results of the analysis of the settlement features at Schagen by Therkorn (forthcoming). As the fabric analysis was not updated for the pottery that in due course was added to the samples for the morphological analyses, there is a slight difference between the samples used for both parts of the study. However, the small variations in sample composition do not affect the interpretations and conclusions.

The content of this book is hierarchically structured according to the research model outlined in chapter 1 and 2. The starting point and aim was to follow the point of view of the makers and users of the pottery as closely as possible. The two major parts are the analysis of fabrics (chapter 4-7) and that of form and use (chapter 8). The methodology consists of a series of independent analyses within the three major subjects. Their results are summarized throughout the chapters, in which progressively more categories of data are interconnected and associations between them are evaluated. This methodology necessarily leads to some repetition, but it enabled me to carry out observations at different levels of detail and to establish the most meaningful criteria for the definition of categories of pottery, as they may have been distinguished by the makers and users themselves. In chapters 4-7, the operational sequence of actions involved in making a vessel is followed as closely as possible to establish structured variations in raw materials and fabric properties. In chapter 8, all visible characteristics of the products, size, shape, and surface features, are studied for the presence or absence of associations between them. The pottery groups distinguished in this manner are the basis for defining a few primary functions, the intended use, of the pottery, while the study of residues provides independent information about the type of contents, and thus on the actual use. In chapter 9, the data on form and function are connected with those of the fabric analysis while the methods and techniques are evaluated. In chapter 10, all results are summarized and interpreted at a higher level of abstraction, completing the cycle of this pottery research.
