Dr. S. Le Cessie

The work described in this thesis was performed at the department of clinical epidemiology, Leiden University Medical Center, Leiden, the Netherlands, and the Cardiovascular Health and Research Unit, University of Washington, Seattle, USA. This research was supported by the Netherlands Organization for Scientific Research (912-0331 2003) and the Leducq foundation, Paris, France for the development of transatlantic networks of excellence in cardiovascular research.

Financial support by the Netherlands Heart Foundation and the J.E. Jurriaanse Stichting for the publication of this thesis is gratefully acknowledged.

Additional support was kindly provided by Bayer Health Care and Roche Diagnostics.

Table of Contents	Page
Chapter 1 Introduction	7
Chapter 2 The tortuous history of the implementation of early ambulation after delivery	15
Chapter 3 Regular sports activities decrease the risk of venous thrombosis	31
Chapter 4 The relationship between exercise and risk of venous thrombosis in elderly people	49
Chapter 5 Strenuous sport activities involving the upper extremities increase the risk of venous thrombosis of the arm	65
Chapter 6 Minor injuries as a risk factor for venous thrombosis	73
Chapter 7 Mechanisms of the factor V Leiden paradox	89
Chapter 8 Discussion & Summary	105
Samenvatting	117
Dankwoord	125
Curriculum Vitae	127
