ISBN

Cover: Marleen de Jager

Lay-out: dr. P.D. Feitsma

The studies described in this thesis were carried out in the Department of Immunohematology and Blood Transfusion, Leiden University Medical Center.

This study was supported by the Celiac Disease Consortium, an Innovative Cluster approved by the Netherlands Genomics Initiative and partially funded by the Dutch Government (BSIK03009) and by the Center for Medical Systems Biology, a center of excellence approved by the Netherlands Genomics Initiative/Netherlands Organization for Scientific Research (NWO).

Financial support for the publication of this thesis was provided by: DSM, Celiac Disease Consortium, Dr. Schär GmbH/Srl, Phadia BV, GE Healthcare and Nederlandse Coeliakie Vereniging. De Nederlandse Coeliakie Vereniging (NCV), een landelijk opererende vereniging, is opgericht in 1974. De NCV organiseert lotgenoten-contact, biedt en verspreidt informatie, geeft voorlichting en is actief in belangenbehartiging voor mensen met coeliakie en of dermatitis herpetiformis (www.glutenvrij.nl).

Contents

Chapter 1	General introduction	9
Chapter 2	Fine specificity of monoclonal antibodies against celiac disease-inducing peptides present in the gluteome	23
Chapter 3	A universal approach to eliminate antigenic properties of alpha-gliadin peptides in celiac disease	47
Chapter 4	Natural variation in avenin epitopes among oat varieties: implications for Celiac Disease	69
Chapter 5	Efficient degradation of gluten by a prolyl endoprotease in a gastrointestinal model: implications for celiac disease	85
Chapter 6	Discussion	107
	Summary	119
	Samenvatting	123
	List of publications	127
	Curriculum vitae	131
	Abbreviations	135
	Dankwoord	139
