**STATISTICAL MODELLING
OF
REPEATED AND MULTIVARIATE
SURVIVAL DATA**

De uitgave van dit proefschrift werd financieel ondersteund door de afdeling Medische Statistiek van het Leids Universitair Medisch Centrum.

Statistical Modelling of Repeated and Multivariate Survival Data

PROEFSCHRIFT

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus prof. mr. P. F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 7 maart 2007
klokke 15:00 uur

door

Claire Marie Antoinette Wintrebert

geboren te Montpellier, Frankrijk,
in 1973

PROMOTIECOMMISSIE

PROMOTORES: Prof. dr. J. C. van Houwelingen
Prof. dr. A. H. Zwinderman
· *Amsterdam Medical Centre, Amsterdam*

REFERENT: Prof. dr. D. Commenges
· *Universiteit van Bordeaux II, Frankrijk*

OVERIGE LEDEN: Prof. dr. J. N. Kok
Dr. H. Putter

Contents

1 Introduction: Survival Analysis and Frailty Models	1
1.1 Introduction: survival analysis	1
1.1.1 Probability tools	1
1.1.2 Censored and truncated data	2
1.1.3 Common estimators of the survival function	2
1.1.4 Cox-regression model	3
1.1.5 Martingale Residuals and counting process approach	4
1.2 Frailty models	5
1.2.1 Introduction	5
1.2.2 Univariate frailty models	5
1.2.3 Multivariate frailty models	7
1.3 Introduction of the next chapters: Outline of the thesis	10
2 Centre-effect on Survival after Bone Marrow Transplantation: Application of Time-dependent Frailty Models	11
2.1 Introduction	12
2.2 Methods	13
2.2.1 The data set	13
2.2.2 Models	14
2.2.3 Unconditional hazard functions	19
2.2.4 Dependence structure	19
2.3 Analysis of the CML data	20
2.4 Concluding Remarks	25
3 Joint Modelling of Breeding and Survival in the Kittiwake Using Frailty Models	29
3.1 Introduction	30
3.2 Material and Methods	32
3.2.1 The data set	32
3.2.2 Methods	32
3.3 Results	37
3.3.1 Description of the sample	37
3.3.2 Survival	38
3.3.3 Breeding attempts	39

3.3.4	The joint model	39
3.4	Discussion	41
4	Assessing Genetic Effects in Survival Data by Correlating Martingale Residuals with an Application to Age at Onset of Huntington Disease	47
4.1	Introduction	48
4.2	Methods	49
4.2.1	Data structure	49
4.2.2	Score test on martingale residuals	49
4.2.3	Estimation of the correlation for individuals with same genetic distance	51
4.3	Data set and results	52
4.3.1	Data set and first analysis	52
4.3.2	Results of score tests	55
4.3.3	Estimation of correlation	56
4.4	Concluding remarks	56
5	Estimation of the Correlation Between Processes With Frailties: Cardiac, Cerebral and Peripheral Atherosclerosis	61
5.1	Introduction	62
5.2	Data	62
5.3	Model	63
5.4	Results	66
5.5	Concluding remarks	68
6	Marginal Survival Curve Estimates in Unbalanced Grouped Failure Time Data	73
6.1	Introduction	74
6.2	Methods	74
6.2.1	Weighted Model	75
6.2.2	Mixed-effects model	77
6.2.3	Simulations	78
6.3	Results	80
6.4	Concluding Remarks	82
7	General Summary	89
Samenvatting:		
Statistisch Modelleren van Herhaalde en Multivariate Overlevingsgegevens		93
Bibliography		97
