Coupling light to periodic nanostructures

Eduard Driessen

**Coupling light
to
periodic nanostructures**

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. P. F. van der Heijden,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 24 september 2009
klokke 13:45 uur

door

Eduard Frans Clemens Driessen

geboren te Utrecht
in 1979

Promotiecommissie:

Promotor:	Prof. Dr. J. P. Woerdman	Universiteit Leiden
Copromotor:	Dr. M. J. A. de Dood	Universiteit Leiden
Leden:	Prof. Dr. G. W. 't Hooft	Philips Research/ Universiteit Leiden
	Dr. Ir. H. L. Offerhaus	Universiteit Twente
	Prof. Dr. M. A. G. J. Orrit	Universiteit Leiden
	Prof. Dr. J. M. van Ruitenbeek	Universiteit Leiden

The work presented in this thesis has been made possible by financial support from the Dutch Organization for Scientific Research (NWO) and is part of the scientific program of the Foundation for Fundamental Research of Matter (FOM).

Casimir PhD Series, Delft-Leiden, 2009-008
ISBN/EAN: 978-90-8593-056-3

Contents

1	Introduction	1
1.1	Periodic nanostructures	2
1.2	Bound modes in slabs and at surfaces	3
1.2.1	Waveguide modes	4
1.2.2	Surface plasmons	5
1.3	Periodic guiding structures	6
1.4	This thesis	8
1.5	Polarization convention	9
	Part I - Photonic-crystal slabs	11
2	Fano resonances and waveguide modes in a two-dimensional photonic-crystal slab	13
2.1	Introduction	14
2.2	Photonic crystal fabrication	14
2.3	Theory	17
2.3.1	Fano model	17
2.3.2	Waveguide modes	20
2.4	Reflection measurements	24
2.5	Conclusion	26
3	Asymmetry reversal in the reflection from a two-dimensional photonic-crystal slab	27
3.1	Introduction	28

3.2	Experiment	28
3.3	Model	29
3.4	Conclusion	32
4	Imaging of a Fano resonance in a two-dimensional photonic-crystal slab	33
4.1	Introduction	34
4.2	Sample	34
4.3	Normal-incidence reflection spectrum	35
4.4	Imaging of the resonance	37
4.4.1	k -space imaging and polarization properties	38
4.4.2	Real space imaging	40
4.5	Conclusion	44
	Part II - Metal hole arrays	45
5	Enhanced coupling between plasmons in hole arrays with periodic dielectric antennas	47
5.1	Introduction	48
5.2	Experiment	49
5.3	Coupling to surface plasmons	50
5.4	Coupling between surface plasmons	53
6	Waveguide modes in solid-state index-matched metal hole arrays	55
6.1	Introduction	56
6.2	Waveguide modes	56
6.3	Effects of layer thickness	59
6.4	Conclusion	62
7	Observation of coupling between surface plasmons in index-matched hole arrays	63
7.1	Introduction	64
7.2	Experiments	64
7.3	Model	67
7.4	Conclusion	73
	Part III - Superconducting single-photon detectors	75

8 Polarization-dependent optical absorption of superconducting single-photon detectors	77
8.1 Introduction	78
8.2 Experimental setup	79
8.3 Characterization	81
8.4 Polarization dependence	84
8.5 Discussion	88
8.5.1 An optical impedance model for the absorption	88
8.5.2 The effect of film thickness	89
8.5.3 Illuminating through sub- or superstrate	91
8.6 Conclusion	92
9 The perfect absorber	95
9.1 Introduction	96
9.2 Absorption of a closed film	96
9.3 Nanostructured films	99
9.4 Conclusions	101
Appendix	103
A Fabrication recipe for photonic-crystal slabs	105
A.1 Wafer preparation	105
A.2 Mask definition	106
A.3 Pattern transfer	106
A.4 Mask removal	107
A.5 Membrane formation	107
Bibliography	109
Summary	119
Samenvatting	123
Curriculum Vitæ	127
Acknowledgements	131
