**Site 'definition':**

Spolia may have belonged to temple. Scatter below rock-shelters suggest a Medieval village going with the church. Ancient walling and a fragment of pithos may belong to an isolated Minoan house.

Comments: Although many of the early Greek sites in the area produce abundant architectural evidence, pottery densities are never high among the ridge sites. This may be related to the length of time these sites were occupied, or to function (or even to erosion).
