Toward a neuroscience of parenting

Adult attachment and oxytocin affect neural and behavioral responses to infant attachment signals

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 4 juni 2013
klokke 15.00 uur
door

Madelon Mathilda Elisabeth Hendricx-Riem

geboren te Maastricht

in 1984

Promotiecommissie

Promotores:

Prof. dr. M.J. Bakermans-Kranenburg

Prof. dr. M.H. van IJzendoorn

Overige leden:

Prof. dr. J.A. Coan (University of Virginia)

Prof. dr. E.A. Crone

Prof. dr. S.A.R.B. Rombouts

Prof. dr. H. Swaab

The studies described in the current thesis were supported by grants of the Netherlands Organization for Scientific Research (NWO) awarded to M.J. Bakermans-Kranenburg (VIDI grant no. 452-04-306; VICI grant no. 453-09-003), and M.H. van IJzendoorn (NWO SPINOZA prize).

Contents

1. Introduction	7
2. Oxytocin modulates amygdala, insula and inferior frontal gyrus responses to infant crying: A randomized controlled trial	15
3. No laughing matter: intranasal oxytocin administration changes functional brain connectivity during exposure to infant laughter	29
4. Attachment in the brain: adult attachment representations predict amygdala and behavioral responses to infant crying	45
5. Pity or Peanuts? Oxytocin affects neural response to sick and bored infant crying	63
6. Does intranasal oxytocin promote prosocial behavior to an excluded fellow player? A randomized-controlled trial with Cyberball	77
7. Oxytocin effects on complex brain networks are moderated by experiences of maternal love withdrawal	89
8. Discussion	103
Nederlandse samenvatting (Summary in Dutch)	115
Dankwoord (Acknowledgements)	123
Curriculum Vitae	125
Publicaties (List of publications)	127
Referenties (References)	129
Appendix: Oxytocin receptor gene and depressive symptoms associated with physiological reactivity to infant crying	149
