Title: Mobility and diet in Neolithic, Bronze Age and Iron Age Germany : evidence from multiple isotope analysis

Issue Date: 2012-06-06

10. Acknowledgements

First of all, I would like to thank the people who gave me the opportunity to start my PhD at the MPI for Evolutionary Anthropology. Since the first time I heard about the MPI-EVA and visited the Köhler Primate Research Center in the Leipzig Zoo as an undergraduate student of anthropology in 2002, I hoped that one day I could work at this fantastic institution. Mike Richards invited me to join his research group and offered me a PhD project that perfectly matched my university education background and interest. He gave me the opportunity to learn more about isotopes and archaeological science in one of the best isotope laboratories in Europe. This project was initiated and developed by Julia Koch and supervised and coordinated by Sabine Rieckhoff from the Department of Pre- and Protohistory at Leipzig University. I give sincerely thanks for their efforts in making this project fruitful. The German Federal Ministry for Education and Science is acknowledged for funding this PhD thesis from August 2008 to July 2011. I thank Jean-Jaques Hublin for welcoming me in his department and for supporting me in finishing my PhD thesis.

During my PhD studies at the department of Human Evolution, my supervisor Mike Richards supported my ideas and refocused my thoughts when I got discouraged. I am grateful to Mike for the chance to work with, and learn from the best researchers in this field. Among these great people, I would like to thank Olaf Nehlich, for encouraging me to apply for a position at the MPI-EVA in the first place, helping me to get started in the laboratory and introducing me to my new colleagues. Kate Britton was not only a good friend with an inspiring English accent and attitude, but also an experienced colleague that always had good comments on laboratory issues and scientific writing. I thank her for her patience in reading my papers and for her helpful suggestions as well as for many lovely evenings. Moreover, I thank Vaughan Grimes for patiently introducing me to the strontium extraction procedure in the ultraclean laboratory although he was packing up his home to move to Newfoundland. I also thank Ben Fuller, Maura Pellegrini, Marcello Mannino and Colin Smith for their encouraging advice, and Annabell Reiner, Sven Steinbrenner, Steff Bösel and Steffi Albert for help in the lab. I thank Silke Streiber, Conny Schicke, and most of all Diana Carstens for their kindness and administrative support. Furthermore, I thank Collin Moore and Rebecca Kinaston for proof reading parts of this thesis.

The Department of Human Evolution at the MPI-EVA has been an inspiring place to work, not only because of the different research areas and nationalities, but mainly because of the people working here. Especially, I thank Nicolas for several years of controversial, absurd and mostly boozy conversations in this ivory tower of knowledge. Thanks for being a true buddy to me and Sandro. I thank my fellow PhDs Tamara, Domingo, Collin and Andre for many occasions when we had a good time. And I thank Sarah for being a pleasant and quiet desk neighbor over the years.

At this point it is also time to thank my family for their support. My parents Michael and Konstanze have always believed in me, although I sometimes got lost finding out what I want to do and what profession I want to choose. I don't really know how they managed that, but I am very grateful to them for not letting me down, and encouraging me to go my own way. I am glad to see their happiness and pride about how things worked out and yet I know I should call more often...I dedicate this thesis to my parents, as it would not have happened without their support.

I also dedicate this work to my *Omutti* (grandmother) Annegret, who was not able to experience me finishing my masters in Mainz and moving to Leipzig for my PhD. She would have been amazed by the fact that I moved back to our family's roots and live in a city she has visited many times as a young woman, going to tea dance or the opera. I would have liked to tell her how much I feel at home here and how well I get along with the people from Saxony with their weird accents. I guess she would have smiled about my emotionalism.

And finally, I thank Sandro for everything. After seeing my unique chance to start a PhD at the MPI, he was willing to leave behind his unfinished university studies, job, friends and family, to start something new together. Doing that was anything but granted and I deeply acknowledge the personal sacrifices he made for our relationship. I consider myself very lucky; being aware that's more an exception than the rule. Further, I thank Sandro for taking care of maintaining friendships with old friends and socializing new contacts to so many fabulous and interesting people in Leipzig. He ensured me a healthy social life during my PhD work and I am very grateful for that. Last, I thank him for the many proof readings and corrections of papers, presentations and whatnot in both English and German. I hope one day I can recompense all the time and nerves he spent.
