Acknowledgements

The work presented in this thesis would not have been possible without the help and support from a number of people.

First of all, I would like to thank my supervisor, Willem (prof. Van der Does), for giving me the opportunity to embark on this trip. With his guidance, support and special sense of humor he made my daily work effective, efficient, and above all pleasurable. He has been an inspiring teacher and an open-minded research companion. In addition, thanks to his kindness, understanding, and trust in my working abilities, he gave me freedom to work in my own time and space when feasible. I would definitely place him in the top 5% of supervisors.

My gratitude also goes to the reading committee of my thesis: prof. Brenda Penninx, prof. Philip Spinhoven, and Dr. Catherine Harmer. Thank you all for your time and effort in reading my work. Sincere thanks also to my co-authors, who have assisted me with my research projects.

I would like to thank my colleagues in my department for facilitating my work every day. During the past four years, I have interacted somehow with each one of you; you have assisted me in my work or helped me out in some way. I have learned a lot in this stimulating working environment. As member of the staff I felt respected and appreciated. In addition, thank you all for your patience with my slow learning of the Dutch language. A big 'thank you' goes to my office roommates for the cozy atmosphere, for making work more fun, and for tolerating my complaining about the weather for all those months (bedankt roomies!). I am also very grateful to my paranymphs for their help throughout this journey and especially during the last phase of this process.

Words do not suffice to convey my gratitude to my grandparents, my parents, my friends and my partner (you know who you are!). Without your love and support, my endeavors wouldn't have been accomplishable. Σας Ευχαριστώ.

Niki Antypa was born on May 15, 1982 on the island of Chios, Greece. She attended St. Lawrence College, a British School in Athens for her high-school education. During the years 2000-2004 she studied Psychology at the American College of Greece where she obtained a Bachelor of Arts in Psychology, with high distinction. She then moved to the Netherlands to study clinical psychology and in the end of 2006 she obtained her MSc in Psychology (cum laude) from the University of Leiden. From 2007 to 2011 she worked at the department of Clinical, Healthy and Neuro- Psychology (University of Leiden) as a PhD researcher, under the supervision of professor Van der Does. Her work focused on cognitive vulnerability to depression, including the influence of genetic, environmental and nutritional factors.
