in 1974

Promotiecommissie

Promotor: Prof. Dr. Corinne L. Hofman

Promotor: Prof. Dr. Gareth R. Davies

Co-promotor: Dr. Menno Hoogland

Overige leden: Prof. Dr. Hans van der Plicht, Universiteit Leiden

Prof. Dr. T. Douglas Price, University of Wisconsin-Madison

ACKNOWLEDGEMENTS

Throughout the course of the research presented here, I have benefited immensely from the assistance, advice and support of numerous institutions, colleagues and friends. I wish to express my deepest gratitude to everyone that helped to make this research possible and without whom this work could not have been accomplished. I would like to start by thanking the people of the Caribbean, past and present, whose heritage and history is the focus and inspiration for this study.

I am deeply indebted to and thankful for the input, advice, motivation, encouragement, and intellectual support of my supervisors: Professor Corinne L. Hofman, Professor Gareth R. Davies, and Dr. Menno L.P. Hoogland. Professors Hofman and Hoogland not only can be credited with initiating the research that led to the study presented herein but they also supervised most aspects of this project and fully supported this research in every way. Their long-held interest in, and commitment to, the study of mobility and exchange in the prehistoric Caribbean forms the basis of this present work. Furthermore, my research project represents only one component of a much larger international and inter-disciplinary research programme, entitled 'Communicating Communities in the Circum-Caribbean', financially supported by an NWO-funded grant (VICI-project no. 277-62-001) awarded to and under the supervision of Prof. Corinne Hofman. I am extremely grateful to Prof. Gareth Davies not only for supervising the analytical components of this research but also for his help, guidance, and direction concerning various aspects of isotope analyses. All three of my supervisors also patiently read and reread many earlier drafts and versions of this dissertation and provided invaluable feedback for which I am extremely grateful. I would also like to expressly acknowledge the Netherlands Organization for Scientific Research (NWO) for the financial support that made this research possible. In addition, I am also very thankful for the assistance and support of the Faculty of Archaeology at Leiden University.

In addition, I would also like to take this opportunity to thank the Department of Anthropology at the University of Illinois-Chicago (UIC) and my former colleagues and

professors there who taught, guided, and encouraged me throughout my undergraduate and early graduate studies. I would like to particularly express my gratitude to Cameron Wesson who gave me my first opportunity to do archaeological fieldwork and who encouraged me to follow my dream to become an archaeologist. I am also thankful for the support and guidance of many other professors at UIC who contributed in various ways to my academic and professional development especially Kathy Rizzo, Lawrence Keeley, Joel Palka, Sloan Williams, Anna Roosevelt, and Ryan Williams. I would like to express my sincerest gratitude to Antonio Curet who introduced me to Caribbean archaeology and kindly gave me my first opportunity to do archaeological research in the region, who guided and supported me throughout my studies at UIC, and without whom I would not be where I am today.

During the course of this work, I had the wonderful opportunity to visit many of the islands of the Caribbean in the process of collecting samples. These trips provided invaluable experience in terms of getting acquainted with the different islands and their highly variable natural and cultural settings. Traveling between the islands also provided me with personal experience and perspective on the spatial distances and scale of the region and some of the associated logistical difficulties that can arise with inter-island transportation in such settings. Nonetheless, innumerable institutions and people assisted me during the course of this work and I wish to specifically acknowledge them here and hope that if I forget anyone they will credit it to a lack of memory as opposed to a lack of gratitude. First and foremost, I thank Menno Hoogland who directed much of the sampling and directly or indirectly obtained many of the samples analyzed for this research. I was extremely fortunate that Menno was passionate about my work and I was happily surprised that much of the sample collection and processing was already underway when I began my work for this study. I would also like to specifically thank Peter Siegel and Mice Roca, Marc Dorst, Kathy Martin, Eric Branford, Elizabeth Righter, Raymundo Dijkhoff, Glenis Tavaréz, Reg and Nicky Murphy, Peter O'Brien Harris, Lennox Honychurch, John Crock, Irv Quitmyer, Jay Havisier, Sandrine Grouard, Henri Marchesi, Christian Stouvenot, Dominique Bonnissent, Thomas Romon, James Burton and T. Douglas Price for providing samples, access to sample collections, and/or assistance with the sampling process. Many institutions also generously provided access

to sample collections and materials including the Florida Museum of Natural History; The National Archaeological Museum Aruba; the Saint Lucia Archaeological and Historical Society; the St. Vincent and the Grenadines National Trust; the University of the West Indies, St. Augustine, Trinidad and Tobago; the University of the West Indies, Cave Hill, Barbados; the Field Research Centre, Antigua; El Museo del Hombre Dominicano, Dominican Republic; El Departamento Centro Oriental de Arqueología and Museo El Chorro de Maíta, Cuba. In this regard, I also greatly benefited from the assistance of many friends and colleagues at Leiden University including Arie Boomert, Angus Mol, Hayley Mickleburgh, Rachel Schats, Anne van Duijvenbode, Alice Samson, Ryan Espersen, Samantha de Ruiten, Jorge Ulloa Hung, Roberto Valcárcel Rojas, Yann Hoogland and dozens of students who contributed to this research in many ways and for which I am extremely grateful.

During the course of conducting research at the facilities of the Faculty of Earth and Life Sciences, Free University Amsterdam (VU) I conducted isotope analyzes of several hundred samples. However, it is important to acknowledge that I received a great deal of assistance with sample preparation, processing, and measurement. First and foremost, this research builds on earlier work carried out by several students, analysts and research assistants including Hylke de Jong, Mathijs Booden, Marin Waaijer, and Hayley Mickleburgh who previously analyzed several dozen samples in the context of pilot projects under the supervision of Gareth Davies, Menno Hoogland and Corinne Hofman. My research project has built upon and incorporated the preliminary results of these projects. In addition, I am forever indebted to Richard Smeets who trained me in many of the various laboratory protocols and procedures required for strontium isotope analyses and who was infinitely patient with my many questions concerning isotope chemistry. Thanks are also owed to Laura Font, Martijn Klaver and Lisette Kootker both for the technical assistance with mass spectrometry and more importantly for many interesting and stimulating discussions concerning various aspects of isotope research. I am also thankful for the assistance of Lidewij Radix, Bart de Vos and Esther Plomp who helped me with sample preparing and processing samples on many occasions. I would also like to thank Bas van der Wagt for measuring the elemental concentrations of my samples and

for his much needed help interpreting these data. Lastly, I also thank Suzan Verdegal and Hubert Vonhof for conducting the carbon and oxygen isotope measurements for me.

On both a professional and personal level, I would like to express my gratitude and appreciation to all the colleagues and friends who provided me support of every kind throughout the course of my research. At Leiden, I am especially forever grateful for the friendship and support of Angus Mol, Hayley Mickleburgh, Jimmy Mans, Alice Samson, Daan Isendoorn and Alistair Bright. Further abroad, I would like to specifically thank Will Pestle, Joshua Torres, and Reniel Rodríguez Ramos from whom I have learned much and who were always very supportive of me and my research. Special thanks are also owed to Pepijn van der Linden for designing the cover, and Menno Hoogland and Clément Bataille for providing many of the maps and figures included in this work.

On a more personal note, I would like to thank my family for all of their love and support over the years. I am especially thankful to my mother and father who have always encouraged me in all of my endeavors and dreams know matter how fantastical they must have seemed (or still do). To Noortje, for your patience and understanding throughout this entire process, I thank you and I love you. Finally, I dedicate this dissertation to my son Sam whose timely arrival provided me with some much needed perspective on the really important things in life.

For Sam

TABLE OF CONTENTS

CHAPTER 1	INTRODUCTION	1
1.1	Introduction	1
1.2	Research Problem Statement	3
1.3	Research Project Description.....	5
1.4	Organization of the Dissertation.....	8
CHAPTER 2	MIGRATION STUDIES IN ARCHAEOLOGY	13
2.1	Introduction	13
2.2	Archaeological Approaches to Migration.....	13
2.2.1	Critical Assessment of Irving Rouse’s Contributions to Migrations Studies.....	18
2.3	Anthropological Insights into Migration Processes and Patterns	20
2.3.1	Defining Migration (What is Migration?).....	20
2.3.2	Types of Migration (Scale, Distance, and Boundaries)	23
2.3.3	Migrants and Migrant Groups (Who migrates?).....	28
2.3.4	Reasons, Causes, and Models (Why do people migrate?)	31
2.3.5	Destinations (Where do people migrate?).....	33
2.3.6	Impacts and Consequences of Migration	37
2.4	Migration Research in Caribbean Archaeology.....	40
CHAPTER 3	ISOTOPE ARCHAEOLOGY	47
3.1	Introduction	47
3.2	Strontium Isotopes.....	48
3.2.1	Strontium Isotopes in Natural Systems.....	49
3.2.2	Strontium Isotopes- Geology	49
3.2.3	Strontium Isotopes- Hydrology.....	50
3.2.4	Strontium Isotopes- Atmosphere	52
3.2.5	Strontium Isotope Ecology.....	53
3.2.6	Strontium Isotopes- Biology.....	55
3.3	Strontium Isotopes- Archaeology	58
3.3.1	History of Sr Isotope Research in Archaeology.....	58
3.3.2	Determining the Local Sr Isotope Signature.....	59
3.3.3	Complications and Limitations of Strontium Isotope Analysis	62
3.3.4	Archaeological Applications of Sr Isotope Analysis to Human Migrations.....	67
3.3.5	Other Applications of Sr Isotope Analyses.....	69
3.4	Stable Isotopes	71
3.4.1	Carbon Isotopes	72
3.4.2	Oxygen Isotopes.....	73
3.5	Summary.....	76

CHAPTER 4	METHODS AND TECHNIQUES	77
4.2	Sample Collection Strategies.....	77
4.2.1	Collection of Faunal and Botanical Samples	78
4.2.2	Collection of Human Dental Samples.....	83
4.3	Strontium Isotope Analyses: Sample Processing	84
