CD8⁺ T-cells in Atherosclerosis: mechanistic studies revealing a protective role in the plaque microenvironment

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 28 april 2020
klokke 15:00 uur

door

Janine van Duijn

geboren te Leiden,
in 1992

Promotoren: Prof. Dr. J. Kuiper, Prof. Dr. W. Jiskoot

Copromotor: Dr. Bram Slütter

Promotiecommissie:	Prof. Dr. H. Irth	LACDR (voorzitter)
	Prof. Dr. J.A. Bouwstra	LACDR (secretaris)
	Prof. Dr. C. Monaco	Oxford University
	Prof. Dr. E. Lutgens	Amsterdam UMC
	Dr. D. Ketelhuth	Karolinksa Institutet

The research described in this thesis was performed at the division of BioTherapeutics of the Leiden Academic Centre for Drug Research (LACDR), Leiden University (Leiden, The Netherlands). This work was supported by the Netherlands CardioVascular Research Initiative: the Dutch Heart Foundation, Dutch Federation of University Medical Centres, the Netherlands Organisation for Health Research and Development, and the Royal Netherlands Academy of Sciences for the GENIUS project "Generating the best evidence-based pharmaceutical targets for atherosclerosis" [CVON2011-19] and the European Union's Seventh Framework Programme [FP7/2007–2013 under grant agreement VIA no. 603131]. Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged. The realization of this thesis was also financially supported by Leiden University.

"Not even knowledge takes all strangeness from the world."

Sarah Perry, *The Essex Serpent*

Contents

1	General Introduction	1
1	Cardiovascular disease	2
2	Atherosclerosis	2
2.1	Atherosclerosis initiation	3
2.2	Atherosclerosis progression	4
2.3	Mouse models of atherosclerosis.	5
2.4	Treatment of atherosclerosis	7
3	The immune system in atherosclerosis	7
3.1	Macrophages	8
3.2	Dendritic cells	9
3.3	B-cells	11
3.4	T-cells	11
4	Thesis outline.	15
	References	17
2	The many faces of CD8⁺ T-cells in atherosclerosis	33
1	Introduction	35
2	CD8 ⁺ T-cells in atherosclerosis	35
3	Therapeutic outlook on treatment strategies targeting CD8 ⁺ T-cells	38
4	Conclusion	40
	References	41

3	CD8⁺ T-cells stabilize advanced atherosclerotic lesions	49
1	Introduction	52
2	Materials and methods	53
2.1	Human studies	53
2.2	Animals	53
2.3	Murine studies	53
2.4	Cell preparation and flow cytometry	54
2.5	Histological analysis	54
2.6	Cell culture	55
2.7	Statistical analysis	55
3	Results	56
3.1	CD8 ⁺ T-cell content negatively correlates with macrophage content in human atherosclerosis	56
3.2	Lesion size is not affected by CD8 ⁺ T-cell depletion in advanced stages of murine atherosclerosis	57
3.3	Advanced atherosclerotic lesions show decreased plaque stability upon CD8 ⁺ T-cell depletion and increased inflammatory CD4 ⁺ T-cells responses	58
3.4	FasL blockade increases inflammation in advanced atherosclerotic lesions	59
4	Discussion	61
5	Conclusion	65
	References	66
4	CD39⁺CD8⁺ T-cells limit inflammation in atherosclerotic lesions	75
1	Introduction	77
2	Materials and methods	78
2.1	Human studies	78
2.2	Animals	78
2.3	Bone marrow transplantation experiment	78

2.4	<i>In vitro</i> CD39 blockade.	78
2.5	<i>In vivo</i> CD39 blockade	79
2.6	Flow cytometry	79
2.7	Statistical analysis	79
3	Results	79
3.1	Decreased cytokine production by CD8 ⁺ T-cells in atherosclerotic lesions is associated with an upregulation of CD39 expression. . .	79
3.2	CD39 inhibition can increase cytokine production by CD8 ⁺ T-cells in the lesions.	80
3.3	TCR signaling in the aortic microenvironment induces CD39 expression	82
3.4	CD39 expression is increased on CD8 ⁺ T-cells derived from human atherosclerotic lesions compared to their systemic counterparts	83
4	Discussion	83
	References	89
5	Tc17 CD8⁺ T-cells modulate local inflammatory responses in atherosclerosis	97
1	Introduction	99
2	Methods	100
2.1	Mice	100
2.2	Cell preparation and flow cytometry	100
2.3	<i>In vitro</i> culture of Tc0 and Tc17 cells.	101
2.4	Adoptive transfer.	101
2.5	Histological analysis	102
2.6	Statistical analysis	102
3	Results	103
3.1	Increased expression of ROR γ t by CD8 ⁺ T-cells derived from advanced murine atherosclerotic lesions.	103

3.2	<i>In vitro</i> characterization of Tc0 and Tc17 cells	103
3.3	Adoptively transferred Tc17 cells migrate to the atherosclerotic lesion and affect the local CD4 ⁺ T-cell population	104
3.4	Adoptive transfer of Tc17 cells reduces atherosclerotic lesion development compared to Tc0 transfer in CD8-deficient atherosclerotic mice	106
4	Discussion	107
5	Conclusion	111
	References	112
6	Orchestrating immune responses	121
1	Introduction	123
2	Particle size	124
2.1	Particle distribution	124
2.2	Cellular uptake.	125
2.3	Antigen presentation and APC activation	126
2.4	Skewing immune responses	127
3	Particle shape.	129
3.1	Particle distribution	129
3.2	Cellular uptake.	129
3.3	Antigen presentation and APC activation	131
3.4	Skewing immune responses	131
4	Particle rigidity	131
4.1	Particle distribution	131
4.2	Cellular uptake.	132
4.3	Antigen presentation and APC activation	133
4.4	Skewing immune responses	134
5	Summary and conclusions	135

7 Liposome-based vaccination against an ApoB100-derived CD8⁺ T-cell epitope	153
1 Introduction	155
2 Materials & Methods	156
2.1 Materials.	156
2.2 Liposome preparation	156
2.3 Liposome characterization.	157
2.4 Animals	157
2.5 Bone marrow-derived dendritic cells (BMDCs)	157
2.6 Cell preparation and flow cytometry	157
2.7 Dendritic cell vaccination studies	158
2.8 Atherosclerosis studies.	158
2.9 Liposomal vaccination studies	159
2.10 Histological analysis	159
2.11 Statistical analysis	159
3 Results	160
3.1 Identification of peptide candidates to induce ApoB100-specific CD8 ⁺ T-cells	160
3.2 Preparation of liposomes	160
3.3 Vaccination using DOPC:DOTAP liposomes with encapsulated ApoB100-derived peptides does not affect atherosclerosis development	163
3.4 DOPC:DOTAP liposomes are able to induce antigen-specific CD8 ⁺ T-cell responses towards the SIINFEKL peptide, but not the QSFDSLK peptide in LDLr ^{-/-} mice	166
4 Discussion	166
5 Conclusion	170
References	172

8	General Discussion and Perspectives	179
1	Immunomodulatory treatments for atherosclerosis.	180
2	CD8 ⁺ T-cells exert a protective function in advanced atherosclerotic lesions	181
3	CD8 ⁺ T-cells modulate the immune environment locally within the lesion via several distinct mechanisms	184
4	CD8 ⁺ T-cell directed vaccination in atherosclerosis.	186
5	Perspectives.	187
6	Conclusion	190
