# Appendix 1

## *Mound form modifications*

Modifications done to the form designed for Aguas Buenas to record the mounds found during the systematic survey:

- The model and owner of the photographic camera were added to avoid confusions related to picture numbers, due to multiple team members who took photographs simultaneously.
- Fundamental data such as date and team members were included to facilitate later inquiries regarding the records.
- Following Stark and Guarraty (2008), both parallel and ground visibility were annexed as variables and were classified as high, medium, or low. Ground visibility refers to vegetation density on the ground stepped by the analyst, while parallel visibility is connected to eye level. The former is usually affected by grasses and low vegetation, whereas the latter depends on tree height as well as plant species that grow to a height of more than 0.5 or 1 meter.
- In the mound measurement section, the variable of orientation in relationship to cardinal points was added for width and height measurements. Previous mapping practices detected high variability in the orientation of the lowest and narrowest parts of mounds, so this type of documentation was included to further study mound spatial patterns.
- In the category Current Land Use, the option Forest was included because during the pilot survey, several lots of land were intentionally forested, mainly for wood procurement.
- The material culture section was redesigned in order to acknowledge presence and absence of the different industries or materials present in the research area: ceramics, chipped stone (with obsidian as a separate variable), ground stone, fossils, mortars, petroglyphs, and basalt columns. The same codes used in the pilot survey were applied during mapping so as to enable comparative spatial analysis based on the different recording methods and their degree of resolution. Consequently, the surface distribution of artifacts from the different industries could be studied in relation to mounded sites and landscape features.
- The different densities of surface materials were annotated according to ranges of frequencies observed in previous fieldwork seasons. Consequently, 1-20 fragments was considered low material culture density, while 21-40 units was medium and more than 40 samples was recorded as high.
- In the mound morphology section, three variables were added to top shapes: elevated, surface level, or other. During the first mound recording phases, Arteaga observed high variability in the shapes of the mound tops, which included cases with an unlevelled top. These modifications in the mound recording form took into account the fact that the morphology of the top of the mounds is not only related to the mound's overall shape as it is preserved today, but is also linked to its potential to hold other types of structures, as well as its connections to building techniques, destruction, and erosion patterns.
- The section dedicated to landscape relationships was almost completely

redesigned. To begin with, the category “against landscape” was discarded, because defining such a term is problematic. Instead, two different levels of adjustments to the landscape were included. The first one referred to direct relationships between mounds and specific elements of the landscape, such as alluvial plains, slopes, hilltops, foothills, plateaus, riverbanks, or plains. Second, the relative location of mounds in relationship to rivers, elevations, site design, or unidentified factors was also recorded. Accordingly, if a mound was found, for example, at the foot of a hill and near a river, the first variable was documented as the direct level of landscape relationship, while the second was taken into account as relative location.

- The mound preservation status category was replaced by mound conservation status. Moreover, four different levels of conservation were added: high, medium, low, and unidentified. Within the anthropic modification variable, the most common ones for the research area were taken into account, such as fence, road, plough, construction, looting, etc. For natural modifications, the same criterion was followed, so trees, burrows, insect impact, and other variables were included.
- For construction materials, the “earth” category was replaced by sediment. Additionally, the section dedicated to the types of rocks was expanded to include riverstone, sandstone, and limestone. Apart from that, the different sizes of rocks were now recorded according to their location within the different sections of the mounds: at the foot, slopes, or top of the structures. According to the observations conducted during fieldwork, the team decided to standardize the classification of rock sizes as follows: small (0-20 cm), medium (20-40 cm), and large (over 40 cm). Also, the possibility of mounds without rocks employed as construction materials was added.
- Regarding stone rings forming mounds, the category was expanded to allow for the documentation of several rings per structure, which were numbered from

bottom to top. The old version of the form was confusing in cases with more than one circle of rocks.

- Finally, the team decided to follow Arteaga’s preliminary mound typology and add his classification to the form. This typology included circumscribed leveled elevations, elevated foundations, piles of rocks—both large and small—and stone wheels (Arteaga 2017).

APPENDIX 5

Site	Excavation_Unit	Stratigraphic_Unit	Level	Bag_Number	Recorder	Date_Rec	Weight_Sampled	Weight_Non-Sampled	Avg_Length	Notes
ZAR	ZAR1	ZAR1I1	ZAR1I2	ZAR1I12_9	NRD	30/Dec/16	577.7	491.5	30	Material bastante erosionado, más formas cerradas y paredes gruesas. Si se conservan engobes pero fue difícil distinguir formas cerradas de abiertas. Hay unos fragmentos que parecerían tener engobe blanco, puede ser un proceso deposicional, no es claro. Material muy erosionado, es difícil reconocer formas cerradas de abiertas y hasta distinguir bordes. Puede que muchos sean fragmentos de una misma vasija. El borde está escarabado horizontalmente como los que vimos en AB (la parte más antigua) Muy erosionado, difícil distinguir entre cerrado y abierto, probablemente son fragmentos de pocas vasijas de pasta en general roja.
ZAR	ZAR1	ZAR1I1	ZAR1I3	ZAR1I13_11	NRD	30/Dec/16	141.5	44.1	25	
ZAR	ZAR1	ZAR1I1	ZAR1I3	ZAR1I13_13	NRD	30/Dec/16	165.1	131.6	30

## Appendix 7

### *Aguas Buenas site description*

The *Central Area* of the site was designed as a quadrangular plaza surrounded by mounds forming two rectangular formations. The area is characterized, having similar measurements to a football court, as the social center of the site, possibly used for periodic gatherings. Even though the width of its two accesses is suitable for large quantities of people (ca. 20 m each), their spatial placement—blocked by the *Transitional Ring* and in disconnection to the *Empty Area*—suggest a restrictive nature, to a certain degree.

The *Outer Arches* of the site consist of four concentric mound arrangements built following an elliptical-shoe horse design, which is the most characteristic shape of AB. Mounds within this section are very homogeneous in their formal traits. Four out of the five mounds excavated by PACEN previous to this research (Geurds & van Broekhoven 2012; Geurds 2013a; 2014) belong to this area of the site. The consistency in mound construction practices, relative scarcity of archaeological finds, and the presence of some deposits suggest periodic and short human presence (Auziņa 2018, 98). The arrangement of the *Outer Arches* implies intentions that are twofold. On the one hand, the mound configuration restricts access to the site through the West, a section that lacks an immediate natural boundary, exactly at its geometrical center. On the other hand, the mound concentric disposition channels pedestrian circulation through the site, if we think of the areas between mounds as walkable surfaces surrounded by mounds.

The *Transitional Ring* combines two mound configurations. The first one corresponds with three additional arches, which could be a continuation of the *Outer Arches*. The second one is comprised of

five circular mound clusters of larger proportions. This combination implies a transformation in the building process, from a circular to a cluster planning (Auziņa 2018, 133). Additionally, the mound clusters are larger in size when compared to the arch mounds, and feature more surface finds. Also, during excavations at Mound 301, burnt clay was identified (Vlaskamp 2014, 68).

The *Eastern Cluster* is a concentration of approximately 35 mounds located in the easternmost corner of the site, right by the cliff at the foot of La Garnacha stream. It shows no geometrical patterning and surface materials are more abundant than throughout the rest of the site. Structures are highly variable in shape and sizes (Auziņa 2018, 104), and both oval and rectangular morphologies are found, which are unique to this section of AB. These particularities led A. Geurds (pers. comm. 2014) to hypothesize later domestic practices, and these observations were partially confirmed by Auzina's analysis, which characterizes this area of the site as the result of organic development in contrast to the planned endeavour showed in the *Central Area* and the *Outer Arches*, for example (Auziņa 2018, 108).

The *High Cluster* is situated at the southeasternmost part of the site and is the only section that instead of seemingly follow a geometric plan, adapts to the landscape features, which are characterized by the highest elevations within AB. However, it is important to note that, overall, the *High Cluster* is very similar in size, shape, and orientation to a mound group located at Lázaro Villegas, situated 150 m to the south west and on flat terrain. Therefore, its adaptation to the topography (Auziņa 2018, 109) should be re-evaluated. Apart from that, the *High Cluster* is characterized by the presence of surface materials in the flat area surrounded by mounds, as well as several petroglyphs carved on bedrock outcrops (Vlaskamp 2012; Auziņa 2018, 110). According to Auzina (2018, 109), the proximity to

the water stream suggests strategic placement, and its combination with its location at the highest point of the site implies a potentially connected to visibility of the rest of the mound configurations as well as the open areas.

The *Empty Area* is a 3 ha flat open sector with hardly any mounds located between the *Central Area*, the *Transitional Ring*, and the *Eastern Cluster* (Auziņa 2018, 111). There are only eight mounds within this section of the site, including Mound 272, the highest (4.11 m) of Aguas Buenas, and within the four highest mounds throughout the whole research area of this project. The position of this mound could be spatially related to the *Central Area*, while the rest of the structures seem to follow a slightly rectangular configuration. Also, the two mounds north of Mound 272 could actually be part of the *Transitional Ring*, since they could correspond with one of arches within that configuration. Even though Auziņa (2018, 111) did not identify a spatial logic to the arrangement of these mounds, the eastern structures seem to delimit one of the entries of the site to the north (see below), while they could also channel pedestrian circulation between the *Eastern Cluster* and the *Central Area*. Even though it is possible that mounds from the empty area belonged to other configurations within the site (Auziņa 2018, 111) and therefore to other construction events, the low densities of material culture suggest practices not related to the *Eastern Cluster*, but more to the planned part of the site.

Regarding accessibility, three different entries to the site have been identified. The first one, briefly mentioned above, consists of a pathway 35 to 45 m wide located west of the site and cutting through the *Outer Arches* almost exactly in half, and then interrupted by the *Transitional Ring* (Auziņa 2018, 94). The second access, with more restrictive characteristics, is found at the north of the site, not only cutting across the *Outer Arches* but also the *Transitional Ring*. The only entry that has direct connection with the *Central Area* is located to the East of the site, and links AB with La Garnacha stream. Additionally, AB features individual rock carvings and petroglyph ensembles, connected not only to bedrock outcrops but also possibly used as landmarks signaling access to La Garnacha stream through the *Eastern* and *High Clusters* (Auziņa 2018, 114).

*B Macrotrace (petro)*

MF group	Sherd code	Stratigraphy	Vessel part	Shape (cm)	Wall thickness (mm)	Macro- assessment	Petro- graphic Gr.	Grain	Collis (cm)	Lip coil	Position LC	Equi- dis- tant	Position	Pre- forming	Grain position	Stria- tions	Finishing	Surface treat- ment	Firing T	Context	Pro- posed use	Comments
JOR2. KKK4	JOR2. 41	V6	Body	O?	N/A	N/A	3	1.5	N/A	N/A	YES	Oblique (l-o)	Pinching, drawing	Outside/ inside	NO	WC, scraping	LHC smoothing (outside) <750 °C	Floor	Cooking/ Storage	Surface undulation following cores, roughing out was not thorough (though effective). Excellent traces, similar to JOR2.41, coils are felt because of the undulating topography of the sherd. Excess of clay due to fixing or carelessness on the smoothing process. Fire marks outside, especially on base section!		
JOR2. FF4(1)	JOR2V 7	JOR2 V7	Body/B ase	O?	N/A	Temper?	2 (Subgro up)	1.7	N/A	N/A	YES	Oblique (l-o)	Pinching, drawing	Outside/ inside	YES	WC, scraping	LHC smoothing (outside) <750 °C	Floor	Cooking/ Storage	Carca rim, difficult to assess finishing due to heavy LHC st. However, a section left at the ext surface for decorative purposes (carca) leaves striations+irregular topography		
JOR2. UJ2	JOR2. 68.1	V6	Rim	CR/O	35	Sieved/S orted?	3	2.2	body	Outside	N/A	Oblique (l-o)	Pinching, drawing	Outside/ inside	NO	WC, scraping?	Slip and LHC smoothing (outside) <750 °C	Feature (hearth)	Cooking/ Storage	Punctuated, tool mark around support scar. Extremely good roughing out, unlike the first two samples. Ejected grains due to burnishing? Doubled fashioning of base part, but clear coil juncture at support area		
JOR2. JJ3	JOR2. 68.2	V6	Rim	CRD	25	Temper?	N/A	1.1	body	Outside	YES	Spiral?	Pinching, drawing	Inside/ e/ ected	NO	LHC?	Red slip, LHC smoothing, burnishi ng (outside) <750 °C	Feature (hearth)	Serving	Surface undulation marking coils, fracture through those Cannot assess finishing due to LHC finishing, might have erased steps. No real evidence of shaving. Chipote applique with punctuation in the middle on outer surface. Red slip band on lip		
JOR2. HH4	JOR2. 37	V7	Body	O?	N/A	N/A	2 (Subgro up)	1.5	N/A	N/A	YES	Oblique (l-o)	Pinching, drawing	Outside/ inside	NO	WC, scraping	LHC smoothing (outside) <750 °C	Floor	Cooking/ Storage	Apparent combination of traces of use of fingers and tool for finishing (scraping and supporting with hand?)		
JOR2. GG51	JOR2. 62	V7	Body	CR	45	Sieved/S orted?	2	1.5	>body	Outside	YES	Oblique (o-l)	Pinching, drawing	Outside/ inside	NO	LHC?	Red slip, LHC smoothing & fingers & WC, scraping?	Floor	Cooking/ Storage	Black paint on red/orange slip (applied with a brush?), appears to be WC finishing (protuberant grains), but unclear Cylindrical jar? irregular topography (undulating, thinning) + weird microtopo (looks like wet environment but grains are inside, no compactness). Not real evidence of shaving? CHECK		
JOR2. A3	JOR2. 27.2	I5	Rim	CRD	45	Sieved/S orted?	2	1	>body	Outside	YES	Oblique (o-l)	Pinching, drawing	inside	YES	WC, scraping?	LHC smoothing <750 °C	Floor	Cooking/ Storage	Does not look like finger scraping, but there are no tool marks and surface topography is regular (different from the other)		
JOR2. X20.4	JOR2. 21	V7	Rim	CRD	21	Temper?	N/A	1.5	body	outside	YES	Oblique (l-o)	Pinching, drawing	inside	(slip)	WC?	Black paint on red/orange slip, ge slip, burnishe d <750 °C	Floor	Serving

*D Decoration & Appendages*

MF Group	Sample Code	Part	Incision	Punctuation	Applique	Zoomorphic	Anthropomorphic	Paint	Double slip	Acanaladura	Impression	Comments
JOR2.JJ3	JOR2.68.2	Rim+base+s support scar	0	1	1	0	0	0	0	1	0	Leon punteado, punctuation at the center of a slightly concave bowl, lip is acanalado, support scar present. Used for chili grinding?
JOR2.KKK4	JOR2.34.3	Rim	0	0	1	0	0	0	0	0	0	Rim (CR u O) with chipote on the lip (slightly conical)
JOR2.GGG1	JOR2.62	Rim	0	0	1	0	0	0	0	0	0	Applique (maybe lug? but not clear at all) of circular shape, 15mm diam.
JOR2.OO4	JOR2.25	Body (U)	0	0	1	0	0	0	0	0	1	Applied coil perpendicular to base, with circular impressions (9 mm diam, apparently done with a small stick or small finger) creating a sort of rope like effect.
JOR2.PP3	JOR2.45.3	Rim	0	0	1	0	0	0	0	0	0	Applied circle (diam 8 mm), eroded, its flat
JOR2.RR4	JOR2.3	Shoulder	1	0	0	0	0	0	0	0	0	Deep thin (<1mm) incised lines (some parallel, some criss crossing), apparently at the base of the neck of an olla (ext wall)
JOR2.S4	JOR2.45.1	Rim	0	0	1	0	0	0	0	0	0	Applied circle (diam 8 mm), eroded, its flat, maybe same vessel as the other sample above
JOR2.S4	JOR2.39	Handle	0	0	1	0	0	0	0	0	0	Braided handle, made of two coils (1.3-1.4 cm diam)
JOR2.S4	JOR2.25	Support	0	0	1	0	0	0	0	0	0	Cylindrical support, 1.3 cm diameter, 2cm tall
JOR2.LU2	JOR2.68.1	Rim	0	0	0	0	0	0	0	0	1	Carca rim, rough version, apparently clay was cut with a tool and the marks are irregular (5-7mm)
JOR2.LU4	JOR2.24	Body	1	0	0	0	0	0	0	0	0	Parallel lines (<1mm)
JOR2.LU3	JOR2.45	Body	0	0	0	0	0	0	1	0	0	Red on orange
JOR2.24	JOR2.04	Body	1	0	0	0	0	0	0	0	0	Deep parallel (<1mm) lines
JOR2.R1	JOR2.25	Body	0	0	0	0	0	1	0	0	0	Reddish brown paint on white slip
JOR2.D4	JOR2.45	Handle	0	0	1	0	0	0	0	0	0	Curved cylindrical coil, JOR2.45
JOR2.E3	JOR2.3	Body	0	0	0	0	0	0	0	0	0	Black paint on red slip\
JOR2.XX3	JOR2.7	Rim	0	0	0	0	0	1	0	0	0	Black paint on red slip\
JOR2.I1	JOR2.34.5	Rim+body	0	0	0	0	0	1	0	0	0	Black paint on red slip\
JOR2.XX20/13	JOR2.45.5	Rim	0	0	0	0	0	1	0	0	0	Black paint on red slip, two bands below the rim and one on the lip
JOR1.Y3	JOR2.25.5	Rim	0	0	0	0	0	1	0	0	0	Reddish brown paint on white slip, probably same vessel as JOR2.25 (same bag, same traits), check CATALOGS
JOR2.L4	JOR2.3	Body	1	0	0	0	0	0	0	0	0	Two parallel incised lines (sharp object), 1 mm wide
JOR2.X3	JOR2.30	Rim	0	0	0	0	0	0	0	1	0	Not sure it is classified as acanaladura, different levels achieved probably with a tool
JOR2.Y1	JOR2.3	Body	0	0	0	0	0	1	0	0	0	Black paint on red slip
JOR2.V4	JOR2.14	Body	1	0	0	0	0	0	0	0	0	Bands of parallel fine incisions (<1mm) with irregular spacing and oblique in relationship to the next band
JOR2.V4	JOR2.27	Body	1	0	0	0	0	0	0	0	0	Parallel ultra fine lines (<0.5mm) with sharp object, parallel to each other but spaced irregularly
JOR2.I2	JOR2.48	Body	0	0	1	0	0	0	0	0	1	Applique consisting of two parallel coils (7mm wide) with circular impressions creating a sort of rope effect (similar to JOR2.OO4/JOR2.25 and UBI1.K3UBITCXIII5)
JOR2.M4	JOR2.96	Body	0	0	1	0	0	0	0	0	0	Applied circle (diam 11mm), possibly another applique next to it, not clear if body or base
JOR2.J1	JOR2.34	Body	1	0	0	0	0	0	0	0	0	Two parallel incised lines (sharp object), 1 mm wide, internal wall
JOR2.NA	JOR2.48	Body	0	0	0	0	0	1	0	0	0	Black paint on red slip, super small fragment
JOR2.X21	JOR2.3.S1	Base	0	1	0	0	0	0	0	0	0	Several punctation internal wall of the vessel (3x1.5mm)
JOR2.X18	JOR2.25	Body	0	0	1	0	0	0	0	0	0	Applied circle (9mm diam)
JOR2.X22	JOR2.27	Body	1	0	0	0	0	0	0	0	0	Thin parallel bands of thin incised lines (<1mm), oblique to each other
JOR2.GGG1	JOR2.62	Body	0	1	1	0	0	0	0	0	0	Chipote applique with punctation in the middle on outer surface. Red slip band on lip
