<b>Promotor</b>	Prof. dr. P.C.N. Rensen
<b>Copromotor</b>	Dr. S. Kooijman
<b>Leden promotiecommissie</b>	Prof. dr. J.A.P. Willems van Dijk Prof. dr. A. Kalsbeek (AUMC, Amsterdam) Prof. dr. E. Lutgens (AUMC, Amsterdam) Prof. dr. J.A. Kuivenhoven (UMCG, Groningen)

The work described in this thesis was performed at the Department of Medicine, Division of Endocrinology of the Leiden University Medical Center, Leiden, the Netherlands.

Financial support by the Dutch Heart Foundation and the Dutch Bone and Mineral Society (NVCB) for the publication of this thesis is gratefully acknowledged. The research described in this thesis was supported by a grant of the Dutch Heart Foundation (CVON 2014-02 ENERGISE). Maaïke Schilperoort was supported by a grant from the Board of Directors of the Leiden University Medical Center.

# Table of contents

	<b>Page</b>
<b>Chapter 1</b> General introduction and outline	1
<b>Chapter 2</b> Disruption of circadian rhythm by alternating light-dark cycles aggravates atherosclerosis development in APOE*3-Leiden.CETP mice	15
<b>Chapter 3</b> Circadian disruption by shifting the light-dark cycle negatively affects bone health in mice	41
<b>Chapter 4</b> Circadian rhythm of glucocorticoids regulates brown adipose tissue activity and is important for maintaining metabolic health	61
<b>Chapter 5</b> Loss of glucocorticoid rhythm induces an osteoporotic phenotype in mice	79
<b>Chapter 6</b> Time-restricted feeding improves adaptation to chronically alternating light-dark cycles	95
<b>Chapter 7</b> The GPR120 agonist TUG-891 promotes metabolic health by stimulating mitochondrial respiration in brown fat	121
<b>Chapter 8</b> Testosterone reduces brown fat activity in mice	163
<b>Chapter 9</b> General discussion and future perspectives	177
<b>Chapter 10</b>	193
