**Author:** Poiret, T.

**Title:** Néron models in high dimension: nodal curves, Jacobians and tame base change

**Issue date:** 2020-10-20

# Contents

<b>I</b>	<b>Nodal curves, dual graphs and resolutions</b>	<b>1</b>
<b>1</b>	<b>Local structure of nodal curves and their dual graphs</b>	<b>1</b>
1.1	First definitions . . . . .	1
1.2	The local structure . . . . .	2
1.3	The dual graph at a geometric point . . . . .	2
1.4	Quasisplitness, dual graphs at non-geometric points . . . . .	3
<b>2</b>	<b>Primality and base change</b>	<b>5</b>
<b>3</b>	<b>Sections of nodal curves</b>	<b>8</b>
3.1	Type of a section . . . . .	8
3.2	Admissible neighbourhoods . . . . .	11
<b>4</b>	<b>Refinements and resolutions</b>	<b>12</b>
4.1	Arithmetic complexity and motivation for refinements . . . . .	12
4.1.1	Arithmetic complexity . . . . .	12
4.1.2	Factoriality of completed étale local rings . . . . .	13
4.1.3	Factoring sections through the smooth locus . . . . .	14
4.2	Refinements of graphs . . . . .	14
4.3	Refinements of curves . . . . .	15
4.4	Resolutions of nodal curves . . . . .	18
<b>II</b>	<b>Néron models of nodal curves and their Jacobians</b>	<b>20</b>
<b>5</b>	<b>Generalities about Néron models</b>	<b>20</b>
5.1	Definitions . . . . .	20
5.2	Base change and descent properties . . . . .	21
5.3	Schemes vs algebraic spaces . . . . .	23
<b>6</b>	<b>Néron models of Jacobians</b>	<b>24</b>

6.1	Alignment and its relation to the Picard space . . . . .	24
6.1.1	Definition and examples . . . . .	24
6.1.2	Alignment and Néron models . . . . .	26
6.2	Étale-universally prime elements . . . . .	29
6.3	Strict alignment is necessary and sufficient for Néron models to exist . . . . .	31
6.3.1	The necessity of strict alignment . . . . .	31
6.3.2	Fiberwise-disconnecting locus of nodal curves and closure of the unit section of the Picard scheme . . . . .	32
6.3.3	The main theorem . . . . .	35
<b>7</b>	<b>Néron models of curves with nodal models</b>	<b>36</b>
7.1	Factoring sections through refinements . . . . .	37
7.2	First construction of the ns-Néron model . . . . .	39
7.3	Exceptional components and minimal proper regular models . . . . .	43
7.3.1	Definition . . . . .	43
7.3.2	The minimal proper regular model . . . . .	44
7.3.3	Van der Waerden's purity theorem . . . . .	44
7.4	Contractions and stable models . . . . .	46
7.4.1	The stack of n-pointed stable curves and the contraction morphism . . . . .	47
7.4.2	The stable model . . . . .	48
7.4.3	Rational components of the stable model . . . . .	49
7.4.4	Singular ideals of the stable model . . . . .	52
7.4.5	The main theorem . . . . .	54
7.5	Separatedness of the ns-Néron model . . . . .	54
<b>III</b>	<b>Base change of Néron models along finite tamely ramified maps</b>	<b>59</b>
<b>8</b>	<b>Motivation</b>	<b>59</b>
<b>9</b>	<b>Prerequisites</b>	<b>60</b>

9.1 Weil restrictions . . . . .	60
9.2 Fixed points . . . . .	61
9.3 Twisted Lie algebras . . . . .	62
<b>10 The morphism of base change for tame extensions</b>	<b>63</b>
10.1 Compatibility with Weil restrictions . . . . .	63
10.2 A filtration of the Néron model over the canonical stratification .	66
<b>Bibliography</b>	<b>71</b>
<b>Acknowledgements</b>	<b>73</b>
<b>Abstract</b>	<b>74</b>
<b>Samenvatting</b>	<b>75</b>
<b>Résumé</b>	<b>76</b>
<b>Résumé substantiel</b>	<b>77</b>
<b>Curriculum Vitae</b>	<b>82</b>
<b>Correspondence</b>	<b>83</b>
