Chemokine signaling mechanisms underlying inflammation and infection control: insights from the zebrafish model

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op 15 oktober 2020
klokke 11:15 uur

door

Frida Sommer

geboren te Ciudad de México, Mexico
op 13 mei 1987

Promotor: Prof. dr. Annemarie H. Meijer

Co-promotor: Dr. Vincenzo Torraca

Promotiecommissie:

Prof. dr. Gilles P. van Wezel
Prof. dr. Roeland M.H. Merks
Prof. dr. B. Ewa Snaar-Jagalska
Dr. Simone Joosten (LUMC)
Dr. Emma Colucci-Guyon (Institut Pasteur)

Table of contents

Thesis outline	11
General introduction: Chemokine receptors and phagocyte biology in zebrafish	15
Antagonism between regular and atypical Cxcr3 receptors regulates macrophage migration during infection and injury in zebrafish	45
Disruption of Cxcr3 chemotactic signaling alters lysosomal function and renders macrophages more microbicidal	85
Inhibition of macrophage migration in zebrafish demonstrates <i>in vivo</i> efficacy of human CCR2inhibitors	113
General discussion	135
List of Abbreviations	160
Curriculum vitae	161
List of Publications	162
