Title: CRISPR/Cas-induced targeted mutagenesis with Agrobacterium mediated protein delivery

Issue Date: 2018-09-20

A high-magnification microscopic image of plant tissue, likely a cross-section of a leaf or stem. The image shows a complex network of cells with prominent cell walls. In the center, there is a dark, irregularly shaped region that appears to be a site of tissue damage or a specific cellular structure. The overall color palette is dark, with shades of brown, black, and white, highlighting the intricate patterns of the plant tissue.
