Author: Eistrup, C.

Title: From midplane to planets : the chemical fingerprint of a disk

Issue Date: 2018-10-16

From Midplane to Planets
The Chemical Fingerprint of a Disk

Christian Eistrup

From Midplane to Planets The Chemical Fingerprint of a Disk

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 16 oktober 2018 klokke 10.00 uur

door

Christian Eistrup

geboren te Hørsholm, Denemarken
in 1988

Promotor: Prof. dr. E.F. van Dishoeck
Co-promotor: Dr. C. Walsh (University of Leeds)

Overige leden: Prof. dr. E.A. Bergin (University of Michigan)
Prof. dr. H.M. Cuppen (Radboud Universiteit Nijmegen)
Prof. dr. C. Mordasini (Universität Bern)
Prof. dr. I.A.G. Snellen
Prof. dr. H.J.A. Röttgering

Til mor, far og Astrid, for støtten til at tage springet!

The stars are for everyone to see, yet for no one to touch and control. So let go, sit back, relax, be fascinated, become curious, and wonder. The Universe can open and broaden your mind!

CONTENTS

1	Introduction	1
1.1	Planets and exoplanets	2
1.2	Making planets	3
1.3	Protoplanetary disks, and the era of ALMA	5
1.4	Astrochemistry: laboratory, simulations and observations	8
1.5	Combining astrochemistry and planet formation	10
1.6	Comets as fossils of planet-forming material	12
1.7	This thesis	14
1.8	Main conclusions	16
1.9	Future outlook	17
2	Setting the volatile composition of (exo)planet-building material	
	Does chemical evolution in disk midplanes matter?	19
2.1	Introduction	21
2.2	Methods	25
	2.2.1 Physical disk model	25
	2.2.2 Chemical model	28
2.3	Results	30
	2.3.1 Reduced chemical network	31
	2.3.2 Full chemical network	34
	2.3.3 Main nitrogen reservoirs	36
2.4	Discussion	37
	2.4.1 Compositional diversity at different radii: inheritance vs reset	37
	2.4.2 C/O ratio	40
	2.4.3 Implications for planet formation and comets	42
	2.4.4 Caveats of model assumptions	43
2.5	Conclusions	45
2.A	Timescales	47
3	Molecular abundances and C/O ratios in chemically evolving planet-forming disk midplanes	49
3.1	Introduction	51
3.2	Methods	53
	3.2.1 Evolving disk model	54

3.2.2	Higher disk mass: 0.55 MMSN disk	55
3.2.3	Chemical model	58
3.3	Results	58
3.3.1	Static versus evolving disk: shifting icelines	60
3.3.2	Timescales of chemical changes	61
3.3.3	Varying disk masses	66
3.3.4	Importance of initial abundances: inheritance vs reset	67
3.3.5	O ₂ as a significant disk midplane molecule	67
3.3.6	Caveats of model assumptions	68
3.4	Discussion	70
3.4.1	Iceline shifts: comparison to other studies	70
3.4.2	What happens to gaseous CO?	70
3.4.3	Evolving elemental ratios	72
3.4.4	Impact for planet formation and planet atmospheric composition	75
3.5	Summary	76
3.A	Physical structure for 0.55 MMSN disk	78
4	Formation of cometary O₂ ice and related ice species on grain surfaces in the midplane of the pre-Solar nebula	79
4.1	Introduction	81
4.2	Methods	82
4.2.1	Ionisation levels	83
4.2.2	Chemical network	84
4.3	Results	85
4.3.1	PSN abundance evolution	85
4.3.2	Including ozone ice chemistry	89
4.3.3	Exploring the sensitivity of the abundances to assumed grain-surface parameters	90
4.3.4	Including a primordial source of O ₂ ice	95
4.4	Discussion	96
4.4.1	Chemical starting conditions	96
4.4.2	Dependence on ionisation levels	96
4.4.3	Changing E_{bin} for atomic oxygen, and inclusion of O ₃	97
4.4.4	Narrowing down on O ₂ ice production	97
4.4.5	Activation energy for O ₃ ice production pathway	98
4.4.6	Location of O ₂ ice production sweet spot in PSN disk midplane	99
4.4.7	Primordial origin of O ₂ ice	99
4.5	Conclusion	99
4.A	Appendix: additional figures	100
5	Matching protoplanetary disk midplane chemical evolution to cometary compositions	
	A chemical evolution taxonomy for comets	113
5.1	Introduction	115
5.2	Methods	116

5.2.1	Model description	116
5.2.2	Statistical comparison between observations and models . .	118
5.3	Results	119
5.3.1	Full sample of species	119
5.3.2	Correlation for C- and O-carrying species only	121
5.4	Discussion	121
5.5	Conclusion	127
5.A	Evolving modelled abundances and cometary abundances	128
