**Issue Date:** 2018-10-16

From Midplane to Planets  
The Chemical Fingerprint of a Disk

Christian Eistrup

# From Midplane to Planets The Chemical Fingerprint of a Disk

Proefschrift

ter verkrijging van  
de graad van Doctor aan de Universiteit Leiden,  
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,  
volgens besluit van het College voor Promoties  
te verdedigen op dinsdag 16 oktober 2018 klokke 10.00 uur

door

Christian Eistrup

geboren te Hørsholm, Denemarken  
in 1988

Promotor: Prof. dr. E.F. van Dishoeck  
Co-promotor: Dr. C. Walsh (University of Leeds)

Overige leden: Prof. dr. E.A. Bergin (University of Michigan)  
Prof. dr. H.M. Cuppen (Radboud Universiteit Nijmegen)  
Prof. dr. C. Mordasini (Universität Bern)  
Prof. dr. I.A.G. Snellen  
Prof. dr. H.J.A. Röttgering

# CONTENTS

---

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Planets and exoplanets . . . . .	2
1.2	Making planets . . . . .	3
1.3	Protoplanetary disks, and the era of ALMA . . . . .	5
1.4	Astrochemistry: laboratory, simulations and observations . . . . .	8
1.5	Combining astrochemistry and planet formation . . . . .	10
1.6	Comets as fossils of planet-forming material . . . . .	12
1.7	This thesis . . . . .	14
1.8	Main conclusions . . . . .	16
1.9	Future outlook . . . . .	17
<b>2</b>	<b>Setting the volatile composition of (exo)planet-building material</b>	
	<b>Does chemical evolution in disk midplanes matter?</b>	<b>19</b>
2.1	Introduction . . . . .	21
2.2	Methods . . . . .	25
	2.2.1 Physical disk model . . . . .	25
	2.2.2 Chemical model . . . . .	28
2.3	Results . . . . .	30
	2.3.1 Reduced chemical network . . . . .	31
	2.3.2 Full chemical network . . . . .	34
	2.3.3 Main nitrogen reservoirs . . . . .	36
2.4	Discussion . . . . .	37
	2.4.1 Compositional diversity at different radii: inheritance vs reset	37
	2.4.2 C/O ratio . . . . .	40
	2.4.3 Implications for planet formation and comets . . . . .	42
	2.4.4 Caveats of model assumptions . . . . .	43
2.5	Conclusions . . . . .	45
2.A	Timescales . . . . .	47
<b>3</b>	<b>Molecular abundances and C/O ratios in chemically evolving planet-forming disk midplanes</b>	<b>49</b>
3.1	Introduction . . . . .	51
3.2	Methods . . . . .	53
	3.2.1 Evolving disk model . . . . .	54

3.2.2	Higher disk mass: 0.55 MMSN disk . . . . .	55
3.2.3	Chemical model . . . . .	58
3.3	Results . . . . .	58
3.3.1	Static versus evolving disk: shifting icelines . . . . .	60
3.3.2	Timescales of chemical changes . . . . .	61
3.3.3	Varying disk masses . . . . .	66
3.3.4	Importance of initial abundances: inheritance vs reset . . . . .	67
3.3.5	O <sub>2</sub> as a significant disk midplane molecule . . . . .	67
3.3.6	Caveats of model assumptions . . . . .	68
3.4	Discussion . . . . .	70
3.4.1	Iceline shifts: comparison to other studies . . . . .	70
3.4.2	What happens to gaseous CO? . . . . .	70
3.4.3	Evolving elemental ratios . . . . .	72
3.4.4	Impact for planet formation and planet atmospheric composition . . . . .	75
3.5	Summary . . . . .	76
3.A	Physical structure for 0.55 MMSN disk . . . . .	78
<b>4</b>	<b>Formation of cometary O<sub>2</sub> ice and related ice species on grain surfaces in the midplane of the pre-Solar nebula</b>	<b>79</b>
4.1	Introduction . . . . .	81
4.2	Methods . . . . .	82
4.2.1	Ionisation levels . . . . .	83
4.2.2	Chemical network . . . . .	84
4.3	Results . . . . .	85
4.3.1	PSN abundance evolution . . . . .	85
4.3.2	Including ozone ice chemistry . . . . .	89
4.3.3	Exploring the sensitivity of the abundances to assumed grain-surface parameters . . . . .	90
4.3.4	Including a primordial source of O <sub>2</sub> ice . . . . .	95
4.4	Discussion . . . . .	96
4.4.1	Chemical starting conditions . . . . .	96
4.4.2	Dependence on ionisation levels . . . . .	96
4.4.3	Changing $E_{\text{bin}}$ for atomic oxygen, and inclusion of O <sub>3</sub> . . . . .	97
4.4.4	Narrowing down on O <sub>2</sub> ice production . . . . .	97
4.4.5	Activation energy for O <sub>3</sub> ice production pathway . . . . .	98
4.4.6	Location of O <sub>2</sub> ice production sweet spot in PSN disk midplane . . . . .	99
4.4.7	Primordial origin of O <sub>2</sub> ice . . . . .	99
4.5	Conclusion . . . . .	99
4.A	Appendix: additional figures . . . . .	100
<b>5</b>	<b>Matching protoplanetary disk midplane chemical evolution to cometary compositions</b>	
	<b>A chemical evolution taxonomy for comets</b>	<b>113</b>
5.1	Introduction . . . . .	115
5.2	Methods . . . . .	116

5.2.1	Model description . . . . .	116
5.2.2	Statistical comparison between observations and models . .	118
5.3	Results . . . . .	119
5.3.1	Full sample of species . . . . .	119
5.3.2	Correlation for C- and O-carrying species only . . . . .	121
5.4	Discussion . . . . .	121
5.5	Conclusion . . . . .	127
5.A	Evolving modelled abundances and cometary abundances . . . . .	128
