Contents

Chapter 1	General introduction and outline	9			
Chapter 2	An easy-to-use prognostic model for survival in patients with symptomatic long bone metastases	25			
Chapter 3	Epidermal growth factor receptor mutations should be considered as a prognostic factor for survival of patients with pathological fractures or painful bone metastases from non-small cell lung cancer	47			
Chapter 4	Lack of clinical evidence for postoperative radiotherapy after surgical fixation of impending or actual pathologic fractures in the long bones in patients with cancer; a systematic review	63			
Chapter 5	Trends in surgical treatment of pathologic fractures of the long bones advocate the use of prognostic models to identify patients who benefit from centralized care; <i>Based on a questionnaire among members of the Dutch Orthopaedic Society and EMSOS</i>	79			
Chapter 6	What factors are associated with implant breakage and revision after intramedullary nailing for femoral metastases?	105			
Chapter 7	Treatment of actual and impending pathologic fractures of the humerus with intramedullary nails	127			
Chapter 8	Pathologic fractures of the distal femur: current concepts and treatment options	145			
Chapter 9	Treatment of pathological fractures of the long bones	163			
Chapter 10	General summary	185			
Chapter 11	General discussion and future perspectives	193			
Chapter 12	Summary in Dutch (Nederlandse samenvatting)	213			
	Appendices	A. OPTIModel App B. Study protocol for The OPTIMAL Study - a cmRCT C. Validation and cross-cultural adaptation of the Toronto Extremity Salvage Score to Dutch	223 227 241
