Author: Bondarenko, K.

Title: Plan B for particle physics: finding long lived particles at CERN

Issue Date: 2018-11-15

Plan B for particle physics: finding long lived particles at CERN

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 15 November 2018
klokke 11:15 uur

door

Kyrylo Bondarenko

geboren te Kiev (Oekraïne) in 1990

Promotores: Dr. Alexey Boyarsky
Prof. dr. Ana Achúcarro

Promotiecommissie: Prof. dr. N. Serra (University of Zurich, Switzerland)
Prof. dr. S.I. Vilchynskyy (Shevchenko University of Kyiv, Ukraine)
Dr. O. Ruchayskiy (University of Copenhagen, Denmark)
Prof. dr. E.R. Eliel
Prof. dr. K.E. Schalm
Dr. D.F.E. Samtleben

The cover shows the scheme of the SHiP experiment, that is planned to be performed at CERN. The sensitivity of this facility to the light feebly interacting particles is one of the main topics of this thesis.

Casimir PhD series Delft-Leiden 2018-38

ISBN 978-90-8593-368-7

Contents

1	Introduction: Physics beyond the Standard Model	7
1.1	Standard Model of particle physics	7
1.2	Beyond the Standard Model	8
1.2.1	Dark matter	9
1.2.2	Matter-antimatter asymmetry of the Universe	10
1.2.3	Neutrino masses and oscillations	13
1.3	Portals to new physics	14
1.4	Intensity and energy frontiers in searches for new physics	15
1.5	Neutrino portal	16
1.5.1	HNLs and neutrino masses, seesaw formula	18
1.5.2	HNL and baryon asymmetry of the Universe. Leptogenesis	20
1.5.3	HNL and dark matter	20
1.5.4	ν MSM	22
1.5.5	Summary	26
1.6	Scalar portal	26
1.6.1	Scalar as a mediator between DM and the SM	26
1.7	Summary	28
2	Scalar portal	30
2.1	Scalar portal effective Lagrangian	30
2.2	Light scalar production	33
2.2.1	Direct production	33
2.2.2	Production from hadrons	33
2.3	Decay widths of a scalar particle	37
2.3.1	Decay into leptons	38
2.3.2	Decay into hadrons	38
3	Neutrino portal	41
3.1	HNL production in proton fixed-target experiments	41
3.1.1	Production from hadrons	42
3.1.1.1	Production from light unflavored and strange mesons	43
3.1.1.2	Production from charmed mesons	44

3.1.1.3	Production from beauty mesons	44
3.1.1.4	Multi-hadron final states	47
3.1.1.5	Quarkonia decays	47
3.1.1.6	Production from baryons	49
3.1.2	HNL production from tau leptons	49
3.1.3	HNL production via Drell-Yan and other parton-parton scatterings	50
3.1.4	Coherent proton-nucleus scattering	52
3.1.5	Summary	53
3.2	HNL decay modes	53
3.2.1	3-body basic channels	54
3.2.1.1	Charged current-mediated decays	55
3.2.1.2	Decays mediated by neutral current interaction and the interference case	55
3.2.2	Decay into hadrons	56
3.2.2.1	A single meson in the final state	56
3.2.2.2	Full hadronic width vs. decay into single meson final state	58
3.2.2.3	Multi-meson final states	59
4	Description of experiments	62
4.1	SHiP	62
4.1.1	Production of heavy flavor at the SHiP	63
4.1.2	Kaon decay fraction at the SHiP	64
4.2	MATHUSLA	66
5	Sensitivity of the SHiP and MATHUSLA experiments	68
5.1	Analytical estimates	68
5.1.1	Sensitivity comparison: main factors	70
5.1.2	Number and momentum distributions of mesons	71
5.1.3	Shape of the sensitivity curve	73
5.1.3.1	Upper bound of the sensitivity curve	73
5.1.3.2	Maximal probed mass	75
5.1.4	Results	76
5.2	Monte Carlo-based sensitivity estimates	78
5.2.1	FairSHiP: simulation framework for the SHiP experiment	78
5.2.2	Sensitivity towards HNLs	80
5.2.2.1	Sensitivity for mixing with individual flavors and benchmark models	80
5.2.2.2	Full sensitivity matrix for HNLs at SHiP	80
5.2.2.3	Procedure to determine the sensitivity matrix	81

5.2.3	Sensitivity towards dark scalars	82
6	Searching for new physics with the SHiP neutrino detector (iSHiP)	84
6.1	Light dark matter at the iSHiP	84
6.1.1	Production of DM particles	84
6.1.1.1	DIS production	85
6.1.1.2	Coherent production	86
6.1.1.3	Production from mesons	88
6.1.1.4	Summary	88
6.1.2	Number of scattering events	89
6.1.2.1	Effective interaction with nucleons	89
6.1.2.2	Scattering	90
6.1.2.3	Summary	92
6.1.3	Other experiments	93
6.2	Axions at the iSHiP	94
6.2.1	Axion portal	94
6.2.2	Probing ALPs at the iSHiP	95
6.2.2.1	Production	95
6.2.2.2	Detection	98
A	HNL production from hadrons	99
A.1	Leptonic decay of a pseudoscalar meson	100
A.2	Semileptonic decay of a pseudoscalar meson	100
B	HNL decays into hadronic states	104
B.1	Connection between matrix elements of the unflavored mesons	104
B.1.1	G-symmetry	104
B.1.2	Classification of currents	105
B.1.3	Connection between the matrix elements	106
B.2	HNL decays to a meson and a lepton	107
B.3	HNL decays to a lepton and two pions	108
C	Phenomenological parameters	111
C.1	Meson decay constants	111
C.1.1	Decay constants of η and η' mesons	112
C.1.2	Decay constant of the η_c meson	114
C.1.3	Decay constant of ρ meson	114
C.2	Meson form factors of decay into pseudoscalar meson	115
C.2.1	K meson form factors	115
C.2.2	D meson form factors	116
C.2.3	B meson form factors	116
C.3	Meson form factors for decay into vector meson	117

D	Production from J/ψ and Υ mesons	119
D.1	Production from J/ψ	119
D.2	Production from Υ	120
E	Vector-dominance model	121
F	Estimation of the upper bound width	122
	Samenvatting	146
	Summary	148
	List of publications	149
	Curriculum vitæ	151
	Acknowledgements	152
